### Polymerase Chain Reaction

#### Synopsis

In the Polymerase Chain Reaction (PCR) simulation, you will see through eight steps another reaction, similar to the one that takes place, to investigate the crime, understand how testing the suspect about evidence in the house that the burglar may left traces of their gene.

#### Design and

After sampling, you will go to the next window to investigate the sample of DNA you collected. By using a mixture of thermocycling, you can amplify the DNA from the crime scene. It is up to you to make the correct samples accordingly the PCR equipment.

#### How the structure of DNA can be explained as follows:

In the simulation, you will see the DNA sequence on the computer, which illustrates the structure of DNA and the equipment used including all the correct information the experimental process, as well as all specifications of the PCR itself.

#### Identify the samples

In the PCR simulation, you will collect your samples and other correct samples from the computer, then you will make samples the polymerase for change. With you the PCR simulation the structure.

#### Learning Objectives

In the end of this simulation, you will be able to:

1. Identify the function of each particular machine equipment and equipment.
2. Explain to this equipment using the facts as the evidence on the simulation.
