Duffy,Norbert Streitz,Shin'ichi Konomi,Heidi Krömker,2020-11-03 This book constitutes late breaking papers from the 22nd International Conference on Human Computer Interaction HCII 2020 which was held in July 2020 The conference was planned to take place in Copenhagen Denmark but had to change to a virtual conference mode due to the COVID 19 pandemic From a total of 6326 submissions a total of 1439 papers and 238 posters have been accepted for publication in the HCII 2020 proceedings before the conference took place In addition a total of 333 papers and 144 posters are included in the volumes of the proceedings published after the conference as Late Breaking Work papers and posters These contributions address the latest research and development efforts in the field and highlight the human aspects of design and use of computing systems The 42 late breaking papers presented in this volume were organized in topical sections as follows HCI in Automotive Interaction in Intelligent Environments and Digital Human Modeling and Ergonomics Ergonomics and Safety of Intelligent Driver Interfaces Y. Ian Noy,2020-11-25 Even to the casual observer of the automotive industry it is clear that driving in the 21st century will be radically different from driving as we know it today Significant advances in diverse technologies such as digital maps communication links processors image processing chipcards traffic management and vehicle positioning and tracking are enabling extensive development of intelligent transport systems ITS Proponents of ITS view these technologies as freeing designers to re define the role and function of transport in society and to address the urgent problems of congestion pollution and safety Critics on the other hand worry that ITS may prove too complex too demanding and too distracting for users leading to loss of skill increased incidence of human error and greater risk of accidents The role of human factors is widely acknowledged to be critical to the successful implementation of such technologies However too little research is directed toward advancing the science of human ITS interaction and too little is published which is useful to system designers This book is an attempt to fill this critical gap It focuses on the intelligent driver interface IDI because the ergonomics of IDI design will influence safety and usability perhaps more than the technologies which underlie it The chapters cover a broad range of topics from cognitive considerations in the design of navigation and route guidance to issues associated with collision warning systems to monitoring driver fatigue The chapters also differ in intent some provide design recommendations while others describe research findings or new approaches for IDI research and development Based in part on papers presented at a symposium on the ergonomics of in vehicle human systems held under the auspices of the 12th Congress of the International Ergonomics Association the book provides an international perspective on related topics through inclusion of important contributions from Europe North America and Japan Many of the chapters discuss issues associated with navigation and route guidance

because such systems are the most salient and arguably the most complex examples of IDI However the findings and research methodologies are relevant to other systems as well making this book of interest to a wide audience of researchers design engineers transportation authorities and academicians involved with the development or implementation of ITS
