accommodate HDR content to LDR devices Conversely the so called inverse tone mapping is required to upgrade LDR content for displaying on HDR devices We overview HDR enabled image and video quality metrics which are needed to verify algorithms at all stages of the pipeline Additionally we cover successful examples of the HDR technology applications in particular in computer graphics and computer vision The goal of this book is to present all discussed components of the HDR pipeline with the main focus on video For some pipeline stages HDR video solutions are either not well established or do not exist at all in which case we describe techniques for single HDR images In such cases we attempt to select the techniques which can be extended into temporal domain Whenever needed relevant background information on human perception is given which enables better understanding of the design choices behind the discussed algorithms and HDR equipment
