have been identified and used since ancient times to improve the sensory characteristics of food. The main compounds found in plants correspond to four major biochemical classes: Polyphenols, terpenes, glycosides, and alkaloids. Plants synthesize these compounds for a variety of purposes including protection of the plant against fungi and bacteria, defense against insects, and attraction of pollinators and dispersal agents to favor the dispersion of seeds and pollens. Handbook of Food Preservation

M. Shafiur Rahman, 2007-07-16 The processing of food is no longer simple or straightforward but is now a highly interdisciplinary science. A number of new techniques have developed to extend shelf life, minimize risk, protect the environment, and improve functional, sensory, and nutritional properties. The ever-increasing number of food products and preservation techniques create a need for a comprehensive reference work. *Bioactive Compounds and Nutraceuticals from Plant Sources* Charanjit S. A vast majority of the world's population lacks access to essential medicines, and the provision of safe healthcare services. Medicinal plants and herbal medicines can be applied for pharmacognosy or the discovery of new drugs or as an aid for plant physiology studies. In recent years, there has been increased interest in the search for new chemical entities, and the expression of resistance of many drugs available in the market has led to a shift in paradigm towards medicinal research. Herbal treatments, the most popular form of folk medicine, may become an important way of increasing access to healthcare services. *Advanced Pharmacological Uses of Medicinal Plants and Natural Products* provides emerging research exploring the theoretical and practical aspects of drug discovery from natural sources that allow for the effective treatment of human health problems without any side effects, toxicity, or drug resistance. Featuring coverage on a broad range of topics such as ethnobotany, therapeutic applications, and bioactive compounds, this book is ideally designed for pharmacologists, scientists, ethnobotanists, botanists, health researchers, professors, industry professionals, and health students in fields that include pharmaceutical drug development and discovery.
