This book describes the endeavour to relate the particle spectrum with representations of operational electroweak spacetime in analogy to the atomic spectrum as characterizing representations of hyperbolic space The spectrum of hyperbolic position space explains the properties of the nonrelativistic atoms the spectrum of electroweak spacetime is hoped to explain those of the basic interactions and elementary particles In this book the theory of operational symmetries is developed from the numbers from Plato's and Kepler's symmetries over the simple Lie groups to their applications in nonrelativistic special relativistic and general relativistic quantum theories with the atomic spectrum for hyperbolic position and in first attempts the particle spectrum for electroweak spacetime The standard model of elementary particles and interactions is characterized by a symmetry group In general as initiated by Weyl and stressed by Heisenberg quantum theory can be built as a theory of operation groups and their unitary representations In such a framework time position and spacetime is modeled by equivalence classes of symmetry groups For a unification on this road the quest is not for a final theory with a basic equation for basic particles but for the basic operation group and its representations **Science Awakening I** B. L. Van Der Waerden, 2012-12-06 Soon after the publication of my *Ontwakende Wetenschap* the need for an English translation was felt We were very glad to find a translator fully familiar with the English and Dutch languages and with mathematical terminology The publisher Noordhoff had the splendid idea to ask H G Beyen professor of archeology for his help in choosing a nice set of illustrations It was a difficult task The illustrations had to be both instructive and attractive and they had to illustrate the history of science as well as the general background of ancient civilization The publisher encouraged us to find better and still better illustrations and he ordered photographs from all over the world with never failing energy and enthusiasm Mr Beyen's highly instructive subscripts will help the reader to see the inter relation between way of living art and science of the ancient world Thanks are due to many correspondents who have suggested additions and pointed out errors Sections on Astrolabes and Stereographic Projection and on Archimedes construction of the heptagon have been added The sections on Perspective and on the Anaphorai of Hypsicles have been enlarged In the second English edition I have incorporated an important discovery of P Huber which sheds new light upon the role of geometry In Babylonian algebra see p 73 The section on Heron's Metrics see p 277 was written anew following a suggestion of E M Bruins Zurich 1961 B L
Geometry and Algebra in Ancient Civilizations Bartel L. van der Waerden, 2012-12-06 Originally my intention was to write a History of Algebra in two or three volumes In preparing the first volume I saw that in ancient civilizations geometry and algebra cannot well be separated more and more sections on ancient geometry were added Hence the new title of the

 It will deal mainly with field theory Galois theory and theory of groups I want to express my deeply felt gratitude to all those
 who helped me in shaping this volume In particular I want to thank Donald Blackmore Wagner Berkeley who put at my
 disposal his English translation of the most interesting parts of the Chinese Nine Chapters of the Art of Arithmetic and of Liu
