General Accounting Office,1970 Manual of Operations for the S-50 Plant ,1945 It is recognized that the S 50 plant operations are far from standardized and therefore any manual will require continual revision to keep it up to date Even during the period of writing this first edition many changes occurred and were incorporated in the manual Such revisions could delay indefinitely the issuance of the manual and it was felt that in its present form it could be useful in the training of new plant personnel The specific purpose of the

process employed by the Ferclave Corporation in the plant at Oak Ridge Tennessee is one of secret information and cannot be released here It can be stated however that the plant operation involves the processing of a chemical substance This substance is not identified in the plant or in the process but is referred to only as material Its code designation is C 616 The process in general involves the separation of the raw material into constituents with more desirable properties It is not necessary to know the name of the material nor the exact nature of the process in order to carry out the operations so this information will not be given in this Manual The problem involved is to transport the material from the containers in which it is received by the plant into equipment set up in the plant for carrying out the operation to remove the various products from the process equipment and to do other auxiliary operations
