4. When the water turns blue, which gas is most common?	Oxygen
5. When the water turns yellow, which gas is most common?	Carbon Dioxide

www.tangfiu.edu **Challenging Science Standards** Charles R. Ault Jr., 2015-08-06 For several decades educators have struggled to identify the attributes all sciences have in common. In the popular mind, this effort constitutes the importance of teaching the scientific method. In the policy maker's world, this pursuit yields standards for all Americans that unify the sciences. For teachers, the quest for unity has typically meant teaching science as process. However, a curriculum that prioritizes what all sciences have in common obscures their vital differences. For example, studying landslides is very different from doing x-ray diffraction; climate science is unlike medical research. Naïve ideas about scientific unity impoverish the public's ability to evaluate scientific enterprises. *Challenging Science Standards* voices skepticism towards the quest for unity. Through analyses of disciplinary knowledge, school curricula, and classroom learning, the book uncovers flaws in the unifying dimensions of the science standards. It proposes respect for disciplinary diversity and attention to questions of value in choosing what science to teach. Illuminated by vignettes of children and adolescents studying topics ranging from snail populations to horse fossils, *Challenging Science Standards* proposes promising remedies.

Plants and Vegetation Paul Keddy, 2007-06-07 Plants make up 99.9 percent of the world's living matter, provide food and shelter, and control the Earth's climate. The study of plant ecology is therefore essential to understanding the biological functions and processes of the biosphere. This vibrant introductory textbook integrates important classical themes with recent ideas, models, and data. The book begins with the origin of plants and their role in creating the biosphere as the context for discussing plant functional types and evolutionary patterns. The coverage continues logically through the exploration of causation, with chapters, amongst others, on resources, stress, competition, predation, and mutualism. The book concludes with a chapter on conservation, addressing the concern that as many as one-third of all plant species are at risk of extinction. Each chapter is enriched with striking and unusual examples of plants, e.g., stone plants, carnivorous plants, and plant habitats, e.g.,

isolated tropical tepui arctic cliffs Paul Keddy writes in a lively and thought provoking style which will appeal to students at all levels
