(Use the spaces provided for the answers and additional paper if necessary.)

- Obtain from your classmates or from your laboratory instructor, the molar enthalpies of neutralization of hydrochloric acid, sulfuric acid, and phosphoric acid when each reacts with sodium hydroxide.

- Write a chemical equation for each of these neutralization reactions.

- Compare the molar enthalpies of neutralization of hydrochloric acid, sulfuric acid, and phosphoric acid. Discuss the similarities and differences of these data.

The enthalpy of neutralization is measured as per the number of moles of water formed. when one mole of water is formed the enthalpy of neutralization is -57.7 kJ . In case of HCl and H_2SO_4 one, two, and three moles of water are formed respectively. Hence, enthalpy of neutralization will be -57.7 kJ , $2 \times -57.7 \text{ kJ}$, and $3 \times -57.7 \text{ kJ}$.

- When a neutralization reaction was carried out using 100.0 mL of 0.7890 M NH_3 , water and 100.0 mL of 0.7840 M acetic acid, ΔT was found to be 4.76°C . The specific heat of the reaction mixture was $4.104 \text{ J g}^{-1} \text{ K}^{-1}$ and its density was 1.03 g mL^{-1} . The calorimeter constant was 3.36 J K^{-1} .

- Calculate ΔH_{mixin} for the reaction of NH_3 and acetic acid.

$$\begin{aligned} \text{mass of solution} &= \text{total volume} \times \text{density} \\ &= 200 \text{ mL} \times 1.03 \text{ g/mL} = 206.0 \text{ g} \end{aligned}$$

$$\begin{aligned} \text{Heat released} &= \text{mass} \times \text{specific heat capacity} \times \text{change in temp} \\ &= 206.0 \times 4.104 \times 4.76 \\ &= 40.24 \text{ kJ} \end{aligned}$$

40.24 kJ
answer

- At the end of the experiment, it was discovered that the thermometer had not been calibrated. When it was calibrated, it was found that the thermometer read 0.50°C low. What effect would this thermometer reading have on the reported ΔH_{mixin} calculated in (2) above?

The uncalibrated thermometer reads 0.50°C lower than actual, therefore the actual temperature is

$$4.76 - 0.5 = 4.26^\circ\text{C}$$

$$\begin{aligned} \text{Heat released} &= 206.0 \times 4.104 \times 4.26 \\ &= 3603.3 \text{ J} \\ &= 36.03 \text{ kJ} \end{aligned}$$

Laboratory Manual for Principles of General Chemistry J. A. Beran, Mark Lassiter, 2022-08-16 Laboratory Manual for Principles of General Chemistry 11th Edition covers two semesters of a general chemistry laboratory program The material focuses on the lab experiences that reinforce the concepts that not all experimental conclusions are the same and depend on

identifying an appropriate experimental procedure selecting the proper apparatus employing the proper techniques systematically analyzing and interpreting the data and minimizing inherent variables As a result of good data a scientific and analytical conclusion is made which may or may not be right but is certainly consistent with the data Experiments write textbooks textbooks don't write experiments A student's scientific literacy grows when experiences and observations associated with the scientific method are encountered Further experimentation provides additional cause effect observations leading to an even better understanding of the experiment The 11th edition's experiments are informative and challenging while offering a solid foundation for technique safety and experimental procedure The reporting and analysis of the data and the pre and post lab questions focus on the intuitiveness of the experiment The experiments may accompany any general chemistry textbook and are compiled at the beginning of each curricular unit An Additional Notes column is included in each experiment's Report Sheet to provide a space for recording observations and data during the experiment Continued emphasis on handling data is supported by the Data Analysis section **Chemistry** George Tyler Miller, 1987

Laboratory Safety for Chemistry Students Robert H. Hill, Jr., David C. Finster, 2011-09-21 this substantial and engaging text offers a wealth of practical in every sense of the word advice Every undergraduate laboratory and ideally every undergraduate chemist should have a copy of what is by some distance the best book I have seen on safety in the undergraduate laboratory Chemistry World March 2011 Laboratory Safety for Chemistry Students is uniquely designed to accompany students throughout their four year undergraduate education and beyond progressively teaching them the skills and knowledge they need to learn their science and stay safe while working in any lab This new principles based approach treats lab safety as a distinct essential discipline of chemistry enabling you to instill and sustain a culture of safety among students As students progress through the text they'll learn about laboratory and chemical hazards about routes of exposure about ways to manage these hazards and about handling common laboratory emergencies Most importantly they'll learn that it is very possible to safely use hazardous chemicals in the laboratory by applying safety principles that prevent and minimize exposures Continuously Reinforces and Builds Safety Knowledge and Safety Culture Each of the book's eight chapters is organized into three tiers of sections with a variety of topics suited to beginning intermediate and advanced course levels This enables your students to gather relevant safety information as they advance in their lab work In some cases individual topics are presented more than once progressively building knowledge with new information that's appropriate at different levels A Better Easier Way to Teach and Learn Lab Safety We all know that safety is of the utmost importance however instructors continue to struggle with finding ways to incorporate safety into their curricula Laboratory Safety for Chemistry Students is the ideal solution Each section can be treated as a pre lab assignment enabling you to easily incorporate lab safety into all your lab courses without building in additional teaching time Sections begin with a preview a quote and a brief description of a laboratory incident that illustrates the importance of the topic References at the end of each section guide

your students to the latest print and web resources Students will also find Chemical Connections that illustrate how chemical principles apply to laboratory safety and Special Topics that amplify certain sections by exploring additional relevant safety issues Visit the companion site at <http://userpages.wittenberg.edu/dfinster/LSCS> **Active Learning in College Science**

Joel J. Mintzes, Emily M. Walter, 2020-02-23 This book explores evidence based practice in college science teaching It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman's 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching In editing this book we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges 4 year liberal arts institutions comprehensive regional campuses and flagship research universities In keeping with Wieman's challenge our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences The content is structured as follows after an Introduction based on Constructivist Learning Theory Section I the practices we explore are Eliciting Ideas and Encouraging Reflection Section II Using Clickers to Engage Students Section III Supporting Peer Interaction through Small Group Activities Section IV Restructuring Curriculum and Instruction Section V Rethinking the Physical Environment Section VI Enhancing Understanding with Technology Section VII and Assessing Understanding Section VIII The book's final section IX is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years In this view learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base For most students that knowledge base is riddled with a host of naive notions misconceptions and alternative conceptions they have acquired throughout their lives To a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances Clearly this prescription demands far more than most college and university scientists have been prepared for **Chemistry Education** Javier García-Martínez, Elena Serrano-Torregrosa, 2015-05-04 Winner of the CHOICE Outstanding Academic Title 2017 Award This comprehensive collection of top level contributions provides a thorough review of the vibrant field of chemistry education Highly experienced chemistry professors and education experts
