The Goals of Macroeconomic Policy Martin F. J. Prachowny, 1994 Politicians win elections by promising Jobs Jobs Jobs but in practice these promises quickly fall by the wayside The Goals of Macroeconomic Policy asks why It begins with the observation that there is no convincing economic argument that full employment should be the primary objective of economic policy in all circumstances In the light of this it examines why policy has failed so

consistently It explains this by a theory of the labour market which shows why most workers are happy to operate in a way which militates against full employment It then proceeds to analyse the rather dire consequences of this for the budget deficit

Puzzles of Inflation, Money, and Debt: Applying the Fiscal Theory of the Price Level Thomas S. Coleman, Bryan J. Oliver, Laurence B. Siegel, 2021-11-29 The fiscal theory of the price level FTPL provides an update and revision of monetary theory to address puzzles raised by the failure of both the new Keynesian theory commonly used by central bankers and neoclassical monetarism in particular the quantity theory of money as interpreted by Milton Friedman and Anna Schwartz puzzles such as the low inflation that followed the sustained expansionary monetary policies post 2008 We aim to summarize and explain the FTPL as developed by Eric Leeper John Cochrane and others The FTPL builds on neoclassical monetarism by observing that government liabilities bonds notes bills and currency derive their value from the assets that back these liabilities These assets are chiefly the present value of future tax revenues minus government spending other than that part of spending used to service the liabilities themselves This net profit of the government is called the primary surplus This primary surplus can be expressed in real terms a quantity of goods and services rather than a money amount The total real value of the bonds is thus the total real value of the assets backing the bonds the present value of all future real primary surpluses which we shorten to PVFS present value of future surpluses In a very important sense the FTPL harkens back to commodity based theories of money except now the commodity is the real value of future surpluses earned by the government We can then solve for the price level It is simply the nominal value of the bonds the face value or number of bonds issued divided by the real value of the bonds the PVFS If the nominal value of the bonds is held constant and the underlying asset PVFS becomes less valuable prices go up If the PVFS becomes more valuable prices go down We thus calculate the value of money including government liabilities of all maturities the way one would calculate the value of any security through discounted cash flow analysis Note that this approach is consistent with the QTM because if money is defined in the traditional way as currency and demand deposits and we now hold the PVFS the backing of the money constant then the price level is proportional to the amount of money in circulation The FTPL is a more complete theory however because 1 it incorporates all government liabilities not traditional money alone and 2 because it is forward looking and dynamic rather than considering only conditions in the present

European Macroeconomics Robert J. Barro, Vittorio Grilli, 2007-10-01 This major macroeconomics text by Robert Barro and Vittorio Grilli is written from a European perspective It adopts an open economy approach and incorporates full treatment of European labour and financial institutions and markets and covers the main macroeconomic theories and policy in relation to the components of the macroeconomic environment The State and Global Change Hassan Hakimian, Ziba Moshaver, 2020-08-11 Economic liberalisation and reform are widely considered as the favourite remedies for the declining economic fortunes of the Middle Eastern and North African states in the past two decades International economic institutions have been among the main advocates of transition to market led economies in the region and a force contributing to its realisation This has placed the state at the centre of the proposed transformations acting both as an instrument of and an

obstacle to change With attempts at liberalisation worldwide spanning over twenty years the time is ripe for a re evaluation of its premises and outcome The essays in this volume debate the political economy of transition and reforms in the Middle East and North Africa drawing on interdisciplinary approaches and outlooks involving international regional and national levels of analysis The three central themes of the book are the rationale and strategies for reform the processes and outcomes and the nature of the state in the changing global setting
