Rose, 2022-01-07 Accident reconstruction utilizes principles of physics and empirical data to analyze the physical electronic
video audio and testimonial evidence from a crash to determine how and why the crash occurred how the crash could have
been avoided or to determine whose description of the crash is most accurate This process draws together aspects of
mathematics physics engineering materials science human factors and psychology and combines analytical models with
empirical test data Different types of crashes produce different types of evidence and call for different analysis methods Still
the basic philosophical approach of the reconstructionist is the same from crash type to crash type as are the physical
principles that are brought to bear on the analysis This book covers a basic approach to accident reconstruction including the
underlying physical principles that are used then details how this approach and the principles are applied when
reconstructing motorcycle crashes This second edition of Motorcycle Accident Reconstruction presents a thorough
systematic and scientific overview of the available methods for reconstructing motorcycle crashes This new edition contains
Additional theoretical models examples case studies and test data An updated bibliography incorporating the newest studies
in the field Expanded coverage of the braking capabilities of motorcyclists Updated refined and expanded discussion of the
decelerations of motorcycles sliding on the ground A thoroughly rewritten and expanded discussion of motorcycle impacts
with passenger vehicles Updated coefficients of restitution for collisions between motorcycles and cars A new and expanded
discussion of using passenger car EDR data in motorcycle accident reconstruction A new section covering recently published
research on post collision frozen speedometer readings on motorcycles A new section on motorcycle interactions with
