Excellence Gaps in Education Jonathan A. Plucker, Scott J. Peters, 2020-01-15 2017 Texas Association for Gifted and Talented Legacy Scholar Book Award 2017 National Association of Gifted Children Scholar Book of the Year Award. In *Excellence Gaps in Education*, Jonathan A. Plucker and Scott J. Peters shine a spotlight on excellence gaps, the achievement gaps among subgroups of students performing at the highest levels of achievement. Much of the focus of recent education reform has been on closing gaps in achievement between students from different racial, ethnic, or socioeconomic backgrounds by bringing all students up to minimum levels of proficiency. Yet issues related to excellence gaps have been largely absent from discussions about how to improve our schools and communities. Plucker and Peters argue that these significant gaps reflect the existence of a persistent talent underclass in the United States among African American, Hispanic, Native American, and poor students, resulting in an incalculable loss of potential among our fastest-growing populations. Drawing on the latest research and a wide range of national and international data, the authors outline the scope of the problem and make the case that excellence gaps should be targeted for elimination. They identify promising interventions for talent development already underway in schools and provide a detailed review of potential strategies, including universal screening, flexible grouping, targeted programs, and psychosocial interventions. *Excellence Gaps in Education* has the potential for changing our national conversation about equity and excellence and bringing fresh attention to the needs of high-potential students from underrepresented backgrounds. **GED**

Implementations of Expertise Merim Bilalić, Robert Langner, Guillermo Campitelli, Luca Turella, Wolfgang

Grodd, 2015-12-18 When we think about expertise we usually consider people who master tasks at a level not reachable by most other people Although we rarely realise it however most humans are experts in many aspects of everyday life This expertise enables us to find our way through a complex environment that is our life For instance we can instantly recognise multiple objects and relations between them to form a meaningful unit such as an office Thus research on expertise is not only important to investigate the cognitive and neural processes within an elite group but it is also a powerful tool to understand how everyone can acquire complex skills The goal of this Research Topic is to shed further light on the common and distinct neural mechanisms that implement various kinds of expertise We broadly define expertise as skill in any perceptual cognitive social or motor domain with the common core being optimised information processing due to knowledge acquired from repeated experiences Thus we are interested in the full range of mental processes modulated or modified by expertise from simple object or pattern recognition to complex decision making or problem solving in a particular domain These domains can range from everyday or occupational expertise to sports and rather artificial domains such as board games In all cases the aim should be to elucidate how the brain implements these sometimes incredible feats We are particularly interested in connecting cognitive theories about expertise and expertise related performance differences with models and data on the neural implementation of expertise We welcome original research contributions using the full range of behavioural neuroscience methods as well as theoretical methodological or historical reviews and opinion papers focusing on any of the above mentioned aspects **The Complete Book of Colleges, 2018 Edition** Princeton Review, 2017-07
