

Moon Note-Taking Guide

Why do we see the same face of the moon?

Because the moon rotates around its axis at the same rate that it orbits Earth, we always see the same side of the moon. This is called synchronous rotation. The moon's rotation period is 27.3 days, and its orbital period is 27.3 days. This is a result of the fact that the moon's rotation and orbital periods are the same. This is why we always see the same face of the moon.
