HC 739 - Linking Emissions Trading Systems Great Britain. Parliament. House of Commons. Energy and Climate Change Committee, 2015 Carbon pricing is a necessary element in spurring climate change mitigation action In this report it is argued that emissions trading as an established and well recognised policy instrument for controlling greenhouse gas emissions is increasingly popular and spreading around the world As they develop emissions trading systems should be designed so that they are compatible with each other Aligning design elements early on will help improve the prospects of linking different systems in future and therefore maximise opportunities for cost effective emissions reductions As the world's oldest and largest market the EU Emission Trading System will play a critical role in facilitating linking between different markets Before it can do this however it must be seen as a credible market The issue of surplus allowances must be addressed urgently and there should be moves to remove these from the system as soon as possible Any new climate agreement must crucially allow parties to meet their Intended Nationally Determined Contributions INDCs by transferring parts of their contributions to other parties and financing emissions reduction activities in other countries The use of carbon markets will greatly improve the prospects of keeping global average temperatures below 2 C Any agreement reached at the UNFCCC COP 21 in Paris at the end of 2015 should promote the use of carbon markets and facilitate the future linking of emissions trading systems The UNFCCC could also play a critical role in providing basic standards including monitoring reporting and verification
