Field and Service Robotics Shin'ichi Yuta, Hajime Asama, Sebastian Thrun, Erwin Prassler, Takashi Tsubouchi, 2006-07-11
Since its inception in 1996 FSR the biannual International Conference on Field and Service Robotics has published archival volumes of high reference value This unique collection is the post conference proceedings of the 4th FSR in Lake Yamanaka Japan at July 2003 This book edited by Shin ichi Yuta Hajime Asama Sebastian Thrun Erwin Prassler and Takashi Tsubouchi is rich by topics and authoritative contributors and presents the current developments and new directions in field and service robotics The contents of these contributions represent a cross section of the current state of robotics research from one particular aspect field and service applications and how they reflect on the theoretical basis of subsequent developments Pursuing technologies aimed at realizing skilful smart reliable robust field and service robots is the big challenge running throughout this focused collection Moody's International Manual, 1997 *Intelligent Autonomous Systems 9* Tamio Arai, 2006 Autonomy and adaptivity are key aspects of truly intelligent artificial systems dating from the first IAS conference in 1989 The goal of IAS 9 is to lay out scientific ideas and design principles for artificial systems This work contains papers that cover both the applied and the theoretical aspects of intelligent autonomous systems *Natural and Artificial Computation in Engineering and Medical Applications* Jose Manuel Ferrandez Vicente, Jose Ramon Alvarez Sanchez, Felix de la Paz Lopez, Fco. Javier Toledo Moreo, 2013-06-03 The two volume set LNCS 7930 and LNCS 7931 constitutes the refereed proceedings of the 5th International Work Conference on the Interplay between Natural and Artificial Computation IWINAC 2013 held in Mallorca Spain in June 2013 The 92 revised full papers presented in LNCS 7930 and LNCS 7931 were carefully reviewed and selected from numerous submissions The first part LNCS 7930 entitled Natural and Artificial Models in Computation and Biology includes all the contributions mainly related to the methodological conceptual formal and experimental developments in the fields of neurophysiology and cognitive science The second part LNCS 7931 entitled Natural and Artificial Computation in Engineering and Medical Applications contains the papers related to bioinspired programming strategies and all the contributions related to the computational solutions to engineering problems in different application domains specially Health applications including the CYTED Artificial and Natural Computation for Health CANS research network papers In addition this two volume set reflects six interesting areas cognitive robotics natural computing wetware computation quality of life technologies biomedical and industrial perception applications and Web intelligence and neuroscience **Semantic Labeling of Places with Mobile Robots** Óscar Martínez Mozos, 2010-02-04 During the last years there has been an increasing interest in the area of service robots Under this category we find robots working in tasks such as elderly care guiding office and domestic assistance inspection and many more Service robots usually work in indoor environments designed for humans with offices and houses being some of the most typical examples These environments are typically divided into places with different functionalities like corridors rooms or doorways The ability to learn such semantic

categories from sensor data enables a mobile robot to extend its representation of the environment and to improve its capabilities As an example natural language terms like corridor or room can be used to indicate the position of the robot in a more intuitive way when communicating with humans This book presents several approaches to enable a mobile robot to categorize places in indoor environments The categories are indicated by terms which represent the different regions in these environments The objective of this work is to enable mobile robots to perceive the spatial divisions in indoor environments in a similar way as people do This is an interesting step forward to the problem of moving the perception of robots closer to the perception of humans Many approaches introduced in this book come from the area of pattern recognition and classification The applied methods have been adapted to solve the specific problem of place recognition In this regard this work is a useful reference to students and researchers who want to introduce classification techniques to help solve similar problems in mobile robotics
