| -metalloids (semi-metals)                                                                  | -alkaline earth metals |
| -transition metals                                                                         | -halogens              |
| -nonmetals                                                                                 | -noble gases           |
| -Periods                                                                                   | -Groups/ families      |
| Identify groups with the following numbers of valence electrons:<br>1, 2, 3, 4, 5, 6, 7, 8 |                        |

2. Why do the elements in the groups (columns) behave so similar to each other even if they have great differences in their number of protons? **same number of valence electrons and similar chemical properties.**
3. What is the connection between the following terms: **octet rule, valence electrons, and ions?**  
**In order to achieve the octet rule, atoms gain or lose their valence electrons. They become charged ions when this occurs.**
4. a. List the elements that are exceptions to the octet rule    b) Why don't these atoms achieve the octet rule?
