Permaculture Bill Mollison, 2014-09 **Beyond the War on Invasive Species** Tao Orion, 2015-06-17 Invasive species are everywhere from forests and prairies to mountaintops and river mouths Their rampant nature and sheer numbers appear to overtake fragile native species and forever change the ecosystems that they depend on Concerns that invasive species represent significant threats to global biodiversity and ecological integrity permeate conversations from schoolrooms to board rooms and concerned citizens grapple with how to rapidly and efficiently manage their populations These worries have culminated in an ongoing war on invasive species where the arsenal is stocked with bulldozers chainsaws and herbicides put to the task of their immediate eradication In Hawaii mangrove trees *Avicennia* spp are sprayed with glyphosate and left to decompose on the sandy shorelines where they grow and in Washington helicopters apply the herbicide Imazapyr to smooth cordgrass *Spartina alterniflora* growing in estuaries The war on invasive species is in full swing but given the scope of such potentially dangerous and ecologically degrading eradication practices it is necessary to question the very nature of the battle *Beyond the War on Invasive Species* offers a much needed alternative perspective on invasive species and the best practices for their management based on a holistic permaculture inspired framework Utilizing the latest research and thinking on the changing nature of ecological systems *Beyond the War on Invasive Species* closely examines the factors that are largely missing from the common conceptions of invasive species including how the colliding effects of climate change habitat destruction and changes in land use and management contribute to their proliferation There is more to the story of invasive species than is commonly conceived and *Beyond the War on Invasive Species* offers ways of understanding their presence and ecosystem effects in order to make more ecologically responsible choices in land restoration and biodiversity conservation that address the root of the invasion phenomenon The choices we make on a daily basis the ways we procure food shelter water medicine and transportation are the major drivers of contemporary changes in ecosystem structure and function therefore deep and long lasting ecological restoration outcomes will come not just from eliminating invasive species but through conscientious redesign of these production systems *Beyond the War on Invasive Species* is a devastating expos of the military industrial invasive species complex and a sorely needed and impeccably researched volume that should

become one of many as we recover from self destructive attempts to eradicate parts of nature instead of acting with an understanding of the whole Ben Falk author of The Resilient Farm and Homestead and founder of Whole Systems Design

Jameson,Sergiu Musteață,2019-06-14 Recent years have witnessed a rapid increase in the fields of cultural heritage studies and community archaeology worldwide with expanding discussions about the mechanisms and consequences of community participation This trend has brought to the forefront debates about who owns the past who has knowledge and how heritage values can be shared more effectively with communities who then ascribe meaning and value to heritage materials Globalization forces have created a need for contextualizing knowledge to address complex issues and

collaboration across and beyond academic disciplines using more integrated methodologies that include the participation of non academics and increased stakeholder involvement Successful programs provide power sharing mechanisms and motivation that effect more active involvement by lay persons in archaeological fieldwork as well as interpretation and information dissemination processes With the contents of this volume we envision community archaeology to go beyond descriptions of outreach and public engagement to more critical and reflexive actions and thinking The volume is presented in the context of the evolution of cultural heritage studies from the 20th century expert approach to the 21st century people centered approach with public participation and community involvement at all phases of the decision making process The volume contains contributions of 28 chapters and 59 authors covering an extensive geographical range including Africa South America Central America Western Europe Eastern Europe North America and Australasia Chapters provide exemplary cases in a growing lexicon of public archaeology where power is shared within frameworks of voluntary activism in a wide diversity of cooperative settings and stakeholder interactions

governments and academics as leading edge solutions to the challenges of environmental sustainability smarter homes more persuasive technologies and a robust Internet of Things hold the promise for creating a greener world Yet deployments of interactive technologies for such purposes often lead to a paradox they algorithmically optimize heating and lighting of houses without regard to the dynamics of daily life in the home they can collect and display data that allow us to reflect on energy and emissions yet the same information can cause us to raise our expectations for comfort and convenience they might allow us to share best practice for sustainable living through social networking and online communities yet these same systems further our participation in consumerism and contribute to an ever greater volume of electronic waste By acknowledging these paradoxes this book represents a significant critical inquiry into digital technology s longer term impact on ideals of sustainability Written by an interdisciplinary team of contributors this book will be of great interest to students and scholars of human computer interaction and environmental studies

Solar Technology and Global Environmental Justice Andreas Roos,2023-02-02 Building on insights from ecological economics and philosophy of technology this book offers a novel interdisciplinary approach to understand the contradictory nature of Solar photovoltaic PV technology Solar photovoltaic PV technology is rapidly emerging as a cost effective option in the world economy However reports about miserable working conditions environmentally deleterious mineral extraction and toxic waste dumps corrode the image of a problem free future based on solar power Against this backdrop Andreas Roos explores whether ecologically unequal exchange an asymmetric transfer of labour time and natural resources is a necessary condition for solar PV development He demonstrates how the massive increase in solar PV installation over recent years would not have been possible without significant wage price differences in the world economy notably between Europe North America and Asia and concludes that solar PV development is currently contingent on environmental injustices in the world economy As a solution Roos argues that solar technology is best coupled with strategies for degrowth which allow for a transition away from fossil fuels and towards a socially just and ecologically sustainable future This book will be of great interest to students and scholars of solar power philosophy of technology and environmental justice
