Advances in Flow Research Stefan Engeser, 2012-03-20 The concept of Flow was first explained by Csikszentmihalyi 1975 described as an optimal experience he noted that artists were entirely caught up in their projects working feverishly to finish them and then lose all interest in their work after completion The incentive lies in the act of creativity itself The person feels optimally challenged while totally immersed in the activity At the heart of flow research is the motivational aspect of this experience Flow motivates people to carry out certain activities repeatedly seeking a challenge in the act and looking to improve their skills and abilities In this book this motivational aspect will be imbedded in and related to other theories of intrinsic motivation and empirical work on flow and performance The book provides a review of the current flow research with a focus on rigorous analysis on methodology The author takes the time to present methodological aspects in flow research to qualify empirical work In addition this volume presents neuropsychological considerations and empirical correlates of flow experiences The work also describes various theoretical integrations of the different paths being taken within the field of flow research It presents what has been learned since the beginning of flow research what is still open and how the mission to understand and foster flow experience research should continue
