Amar Sahay, 2021-07-06 Data science and analytics have emerged as the most desired fields in driving business decisions. Using the techniques and methods of data science, decision makers can uncover hidden patterns in their data, develop algorithms and models that help improve processes and make key business decisions. Data science is a data driven decision making approach that uses several different areas and disciplines with a purpose of extracting insights and knowledge from structured and unstructured data. The algorithms and models of data science along with machine learning and predictive modeling are widely used in solving business problems and predicting future outcomes. This book combines the key concepts of data science and analytics to help you gain a practical understanding of these fields. The four different sections of the book are divided into chapters that explain the core of data science. Given the booming interest in data science, this book is timely and informative. *Biomass Supply Chains for Bioenergy and Biorefining* Jens Bo Holm-Nielsen, Ehiازه Augustine Ehimen, 2016-02-23 *Biomass Supply Chains for Bioenergy and Biorefining* highlights the emergence of energy generation through the use of biomass and the ways it is becoming more widely used. The supply chains that produce the feedstocks, harvest, transport, store and prepare them for combustion or refinement into other forms of fuel are long and complex, often differing from feedstock to feedstock. *Biomass Supply Chains for Bioenergy and Biorefining* considers every aspect of these supply chains, including their design, management, socioeconomic and environmental impacts. The first part of the book introduces supply chains, biomass feedstocks and their analysis, while the second part looks at the harvesting, handling, storage and transportation of biomass. The third part studies the modeling of supply chains and their management, with the final section discussing in minute detail the supply chains involved in the production and usage of individual feedstocks such as wood and sugar, starches, oil crops, industrial biomass wastes and municipal sewage sludge. Focuses on the complex supply chains of the various potential feedstocks for biomass energy generation. Studies a wide range of biomass feedstocks including woody energy crops, sugar and starch crops, lignocellulosic crops, oil crops, grass crops, algae and biomass waste. Reviews the modeling and optimization standards, quality control and traceability, socioeconomic and environmental impacts of supply chains.
