Beyond the Bubble Test Linda Darling-Hammond, Frank Adamson,2014-05-14 Performance assessment is a hot topic in school systems and educators continue to analyze its costs benefits and feasibility as a replacement for high stakes testing Until now researchers and policymakers have had to dig to find out what we know and what we still have to learn about performance assessment Beyond the Bubble Test How Performance Assessments Support 21st Century Learning synthesizes the latest findings in the field and not a moment too soon Statistics indicate that the United States is in danger of falling behind if it fails to adapt to our changing world The memory and recall strategies of traditional testing are no longer adequate to equip our students with the skills they need to excel in the global economy Instead teachers need to engage students in deeper learning assessing

The Role of Public Policy in K-12 Science Education

George E. DeBoer, 2011-01-01 The goal of this volume of Research in Science Education is to examine the relationship between science education policy and practice and the special role that science education researchers play in influencing policy It has been suggested that the science education research community is isolated from the political process pays little attention to policy matters and has little influence on policy But to influence policy it is important to understand how policy is made and how it is implemented This volume sheds light on the intersection between policy and practice through both theoretical discussions and practical examples This book was written primarily about science education policy development in the context of the highly decentralized educational system of the United States But because policy development is fundamentally a social activity involving knowledge values and personal and community interests there are similarities in how education policy gets enacted and implemented around the world This volume is meant to be useful to science education researchers and to practitioners such as teachers and administrators because it provides information about which aspects of the science education enterprise are affected by state local and national policies It also provides helpful information for researchers and practitioners who wonder how they might influence policy In particular it points out how the values of people who are affected by policy initiatives are critical to the implementation of those policies
