Occupational Therapy Manual Muscle Test:

Occupational Therapy Manual for the Evaluation of Range of Motion and Muscle Strength Deanna Proulx, Donna Latella, 2024-09-30 Aimed at occupational therapy practitioners this practical and comprehensive manual demonstrates how different assessment tools can be used to evaluate the range of motion and strength of clients during physical rehabilitation. The book covers the key areas of evaluation that therapists need to understand including activity analysis, clinical observation, active range of motion, gross motor testing, goniometry, and isolated muscle testing. Reconfigured to match the clinical reasoning process, this new edition has also been reorganized by region and by joint motion to make it more user friendly, mirroring the process by which an evaluation is conducted in practice. Also included are various appendices to support the transition to practice as well as an At a Glance version of the manual itself. This is an essential manual for both occupational therapy practitioners and students in training.

Occupational Therapy Manual for the Evaluation of Range of Motion and Muscle Strength Donna Latella, Catherine Meriano, 2003-02-26 This occupational therapy manual instructs students in the use of assessment tools when evaluating the range of motion and strength of clients yet emphasizes the time efficiency required in today's healthcare environment. Students learn to screen clients for strength and motion deficits using functional observation and to formulate appropriate intervention plans through gross manual muscle assessment. Students also receive instruction in methods of isolated manual muscle testing and when it is appropriate to progress to this specific assessment.
