Wave Energy Convertors in Tropical Seas Zhi Yung Tay, 2025-07-30 Tay provides a comprehensive description of the state of the art for recent conceptual designs on the integration of wave energy convertor WEC systems with floating structures in tropical seas discusses the unique environmental challenges and provides a guide for readers to develop WECs that are optimised for both wave patterns and the structures to which they are attached Through this book readers will gain a deep understanding of the unique environmental characteristics of tropical climates discover how WECs can be integrated into various floating structures and learn how WECs can be adapted and optimised for use in tropical climates This book also focuses on the hydroelasticity of large floating structures and how the structural deformation under wave action affects the energy generation of the WEC Tay provides the theoretical formulation and numerical framework for the modelling of WEC systems when integrated with large floating structures Different wave models and mathematical optimisation schemes are presented to enable readers to determine the best design and application parameters depending on requirements In the book Tay includes case studies to illustrate how power generation of the integrated WEC arrays can be enhanced This includes power enhancement via sloshing resonance wave run up structural deformation and various optimisation schemes These case studies offer reader practical guidance on applying the information in this book to real world scenarios The combination of presented case studies discussion of the challenges of tropical seas and design optimisation parameters make this book invaluable to researchers and industry players working on the concepts of power enhancement and integrated WECs on floating structures

Maritime Technology and Engineering 5 Volume 2 Carlos Guedes Soares, 2021-07-08 This set of two volumes comprises the collection of the papers presented at the 5th International Conference on Maritime Technology and Engineering MARTECH 2020 that was held in Lisbon Portugal from 16 to 19 November 2020 The Conference has evolved from the series of biennial national conferences in Portugal which have become an international event and which reflect the internationalization of the maritime sector and its activities MARTECH 2020 is the fifth of this new series of biennial conferences The set comprises 180 contributions that were reviewed by an International Scientific Committee Volume 2 is dedicated to ship performance and hydrodynamics including CFD maneuvering seakeeping moorings and resistance In addition it includes sections on ship machinery renewable energy fishing and aquaculture coastal structures and waves and currents

Mathematical Modeling of Inland Vessel Maneuverability Considering Rudder Hydrodynamics Jialun Liu, 2020-05-11 This book demonstrates that different rudder configurations have different hydrodynamic characteristics which are influenced by the profile the parameters and the specific configuration The author proposes new regression formulas to help naval architects quickly estimate the rudder induced forces and moments in maneuvering Furthermore the

author proposes and validates an integrated maneuvering model for both seagoing ships and inland vessels Using the proposed regression formulas and maneuvering model the specific impacts of rudder configurations on inland vessel maneuverability are studied In turn the book demonstrates the application of Reynolds Averaged Navier Stokes RANS simulations to obtain rudder hydrodynamic characteristics and the integration of the RANS results into maneuvering models as an accurate estimation of rudder forces and moments needed to quantify the impacts of rudder configurations on ships maneuvering performance In addition the author proposes new criteria for the prediction and evaluation of inland vessel maneuverability Simulations of ships with various rudder configurations are presented in order to analyze the impacts of rudder configurations on ship maneuverability in different classic and proposed test maneuvers Offering essential guidance on the effects of rudders for inland vessel maneuverability and helping practical engineers make informed design choices the book is of interest to researchers and academics in the field of naval engineering as well as students of naval architecture Industrial practitioners working on ship design may also find it beneficial
