Handbook of Visual Optics, Two-Volume Set Pablo Artal, 2017-06-27 Handbook of Visual Optics offers an authoritative overview of encyclopedic knowledge in the field of physiological optics. It builds from fundamental concepts to the science and technology of instruments and practical procedures of vision correction, integrating expert knowledge from physics, medicine, biology, psychology, and engineering. The chapters comprehensively cover all aspects of modern study and practice from optical principles and optics of the eye and retina to novel ophthalmic tools for imaging and visual testing devices and techniques for visual correction and the relationship between ocular optics and visual perception. *Handbook of Virtual Environments* Kelly S. Hale, Kay M. Stanney, 2002-01-01 This Handbook with contributions from leading experts in the field provides a comprehensive state-of-the-art account of virtual environments (VE). It serves as an invaluable source of reference for practitioners, researchers, and students in this rapidly evolving discipline. It also provides practitioners with a reference source to guide their development efforts and addresses technology concerns as well as the social and business implications with which those associated with the technology are likely to grapple. While each chapter has a strong theoretical foundation, practical implications are derived and illustrated via the many tables and figures presented throughout the book. The Handbook presents a systematic and extensive coverage of the primary areas of research and development within VE technology. It brings together a comprehensive set of contributed articles that address the principles required to define system requirements and design, build, evaluate, implement, and manage the effective use of VE applications. The contributors provide critical insights and principles associated with their given area of expertise to provide extensive scope and detail on VE technology. After providing an introduction to VE technology, the Handbook organizes the body of knowledge into five main parts: System Requirements specifies multimodal system requirements including physiological characteristics that affect VE system design; Design Approaches and Implementation Strategies addresses cognitive design strategies, identifies perceptual illusions that can be leveraged in VE design, discusses navigational issues such as becoming lost within a virtual world, and provides insights into structured approaches to content design; Health and Safety Issues covers direct physiological effects, signs, symptoms, neurophysiology, and physiological correlates of motion sickness, perceptual and perceptual motor adaptation, and social concerns; Evaluation addresses VE usability, engineering, and ergonomics, human performance measurement in VEs, usage protocols, and provides means of measuring and managing visual, proprioceptive, and vestibular aftereffects, as well as measuring and engendering sense of presence; Selected Applications of Virtual Environments provides a compendium of VE applications. The Handbook closes with a brief review of the history of VE technology. The final chapter provides information on the VE profession, providing those interested with a number of sources to further their quest for the keys to developing the ultimate virtual world. **Handbook of Remote Biometrics** Massimo Tistarelli, Stan Z. Li, Rama Chellappa, 2009-06-02 The development of technologies for the identification of individuals has

driven the interest and curiosity of many people Spearheaded and inspired by the Bertillon coding system for the classification of humans based on physical measurements scientists and engineers have been trying to invent new devices and classification systems to capture the human identity from its body measurements One of the main limitations of the precursors of today's biometrics which is still present in the vast majority of the existing biometric systems has been the need to keep the device in close contact with the subject to capture the biometric measurements This clearly limits the applicability and convenience of biometric systems This book presents an important step in addressing this limitation by describing a number of methodologies to capture meaningful biometric information from a distance Most materials covered in this book have been presented at the International Summer School on Biometrics which is held every year in Alghero Italy and which has become a flagship activity of the IAPR Technical Committee on Biometrics IAPR TC4 The last four chapters of the book are derived from some of the best presentations by the participating students of the school The educational value of this book is also highlighted by the number of proposed exercises and questions which will help the reader to better understand the proposed topics

High Performance Embedded Computing

Handbook David R. Martinez, Robert A. Bond, M. Michael Vai, 2018-10-03 Over the past several decades applications permeated by advances in digital signal processing have undergone unprecedented growth in capabilities The editors and authors of High Performance Embedded Computing Handbook A Systems Perspective have been significant contributors to this field and the principles and techniques presented in the handbook are reinforced by examples drawn from their work The chapters cover system components found in today's HPEC systems by addressing design trade offs implementation options and techniques of the trade then solidifying the concepts with specific HPEC system examples This approach provides a more valuable learning tool Because readers learn about these subject areas through factual implementation

cases drawn from the contributing authors own experiences Discussions include Key subsystems and components Computational characteristics of high performance embedded algorithms and applications Front end real time processor technologies such as analog to digital conversion application specific integrated circuits field programmable gate arrays and intellectual property based design Programmable HPEC systems technology including interconnection fabrics parallel and distributed processing performance metrics and software architecture and automatic code parallelization and optimization Examples of complex HPEC systems representative of actual prototype developments Application examples including radar communications electro optical and sonar applications The handbook is organized around a canonical framework that helps readers navigate through the chapters and it concludes with a discussion of future trends in HPEC systems The material is covered at a level suitable for practicing engineers and HPEC computational practitioners and is easily adaptable to their own implementation requirements The SAGE Handbook of Visual Research Methods Eric Margolis, Luc

Pauwels, 2011-07-31 This book captures the state of the art in visual research Margolis and Pauwels have brought together in one volume a unique survey of the field of visual research that will be essential reading for scholars and students across the social sciences arts and humanities The SAGE Handbook of Visual Research Methods encompasses the breadth and depth of the field and points the way to future research possibilities It illustrates cutting edge as well as long standing and recognized practices This book is not only about research it is also an example of the way that the visual can be incorporated into data collection and the presentation of research findings Chapters describe a methodology or analytical framework its strengths and limitations possible fields of application and practical guidelines on how to apply the method or technique The Handbook is organized into seven main sections Framing the Field of Visual Research Producing Visual Data and Insight Participatory and Subject Centered Approaches Analytical Frameworks and Approaches Visualization Technologies and Practices Moving Beyond the Visual Options and Issues for Using and Presenting Visual Research Eric Margolis is an Associate Professor in the Hugh Downs School of Human Communication He is President of the International Visual Sociology Association Luc Pauwels is Professor of Visual Culture at the University of Antwerp He is Chair of the Visual Communication Studies Division of the ICA and Vice President of the International Visual Sociology Association IVSA **Word To Silence** Matthew K.
