Todreas, Mujid S. Kazimi, Mahmoud Massoud, 2021-12-13 This book provides advanced coverage of a wide variety of thermal fluid systems and technologies in nuclear power plants including discussions of the latest reactor designs and their thermal fluid technologies Beyond the thermal hydraulic design and analysis of the core of a nuclear reactor the book covers other components of nuclear power plants such as the pressurizer containment and the entire primary coolant system Placing more emphasis on the appropriate models for small scale resolution of the velocity and temperature fields through computational fluid mechanics the book shows how this enhances the accuracy of predicted operating conditions in nuclear plants It introduces considerations of the laws of scaling and uncertainty analysis along with a wider coverage of the phenomena encountered during accidents FEATURES Discusses fundamental ideas for various modeling approaches for the macro and microscale flow conditions in reactors Covers specific design considerations such as natural convection and core reliability Enables readers to better understand the importance of safety considerations in thermal engineering and analysis of modern nuclear plants Features end of chapter problems Includes a solutions manual for adopting instructors This book serves as a textbook for advanced undergraduate and graduate students taking courses in nuclear engineering and studying thermal hydraulic systems in nuclear power plants **Energy Resources and Systems** Tushar Ghosh, Mark Prelas, 2009-06-17 In the lifetimes of the authors the world and especially the United States have received three significant wake up calls on energy production and consumption The first of these occurred on October 15 1973 when the Yom Kippur War began with an attack by Syria and Egypt on Israel The United States and many western countries supported Israel Because of the western support of Israel several Arab oil exporting nations imposed an oil embargo on the west These nations withheld five million

barrels of oil per day Other countries made up about one million barrels of oil per day but the net loss of four million barrels of oil production per day extended through March of 1974 This represented 7% of the free world's i.e. excluding the USSR oil production In 1972 the price of crude oil was about 3.00 per barrel and by the end of 1974 the price of oil had risen by a factor of 4 to over 12.00 This resulted in one of the worst recessions in the post World War II era As a result there was a movement in the United States to become energy independent At that time the United States imported about one third of its oil about five million barrels per day After the embargo was lifted the world chose to ignore the wake up call and went on with business as usual

Fundamentals of Nuclear Engineering Brent J. Lewis, E. Nihan Onder, Andrew A.
