Topol,2016-10-25 The essential guide by one of America s leading doctors to how digital technology enables all of us to take charge of our health A trip to the doctor is almost a guarantee of misery You ll make an appointment months in advance You ll probably wait for several hours until you hear the doctor will see you now but only for fifteen minutes Then you ll wait even longer for lab tests the results of which you ll likely never see unless they indicate further and more invasive tests most of which will probably prove unnecessary much like physicals themselves And your bill will be astronomical In *The Patient Will See You Now* Eric Topol one of the nation s top physicians shows why medicine does not have to be that way Instead you could use your smartphone to get rapid test results from one drop of blood monitor your vital signs both day and night and use an artificially intelligent algorithm to receive a diagnosis without having to see a doctor all at a small fraction of the cost imposed by our modern healthcare system The change is powered by what Topol calls medicine s Gutenberg moment Much as the printing press took learning out of the hands of a priestly class the mobile internet is doing the same for medicine giving us unprecedented control over our healthcare With smartphones in hand we are no longer beholden to an impersonal and paternalistic system in which doctor knows best Medicine has been digitized Topol argues now it will be democratized Computers will replace physicians for many diagnostic tasks citizen science will give rise to citizen medicine and enormous data sets will give us new means to attack conditions that have long been incurable Massive open online medicine where diagnostics are done by Facebook like comparisons of medical profiles will enable real time real world research on massive populations There s no doubt the path forward will be complicated the medical establishment will resist these changes and digitized medicine inevitably raises serious issues surrounding privacy Nevertheless the result better cheaper and more human health care will be worth it Provocative and engrossing *The Patient Will See You Now* is essential reading for anyone who thinks they deserve better health care That is for all of us *Robert Le Rossignol* Deri Sheppard,2020-02-06 A principal aim of this first biography of Robert Le Rossignol engineer of the Haber process is to bring new evidence to the attention of the scientific community allowing a re assessment of the origins of the Haber process However the scope of the book is much wider and goes beyond the discovery of fixation to account for a life distinct from Haber one full of remarkable science cruel circumstance personal tragedy and amazing benevolence the latter made possible by Haber s generous financial arrangement with Le Rossignol regarding his royalties from the BASF Field Volcanology: A Tribute to the Distinguished Career of Don Swanson Michael P. Poland,Michael O. Garcia,Victor E. Camp,Anita Grunder,2018-10-11 Don Swanson who received the GSA Mineralogy Geochemistry Petrology and Volcanology Division s Distinguished Geologic Career award in 2016 has adopted a detailed field oriented approach to studying problems of great volcanologic importance across a range of compositions and spatio temporal scales Swanson s work has resulted in a series of fundamental contributions that have advanced understanding of the Columbia River flood basalts Cascade volcanic arc and Hawai i and his insights have been applied not only around the world but across the solar system This volume emphasizes the role of field volcanology as a

window into better understanding volcanic processes past and present and highlights in particular those places and processes where Swanson's insights have been particularly impactful **Geoethics** S. Peppoloni, G. Di Capua, 2015-08-24 This Special Publication will be an important tool for geoscientists aimed at increasing the awareness of their societal role and responsibility in conducting education research and practice activities What are the responsibilities of a geoscientist And what motivations are needed to push geoscientists to practice the Earth sciences in an ethical way The major environmental challenges affecting human communities require not only a strictly scientific and technical preparation by the geoscientists but also a reflection on their broader obligations towards society It is important that geoscientists consider geoethics as an indispensable framework on which to base their training and activity The principles of geoethics can guide them to pursue the common good by weighing the benefits and costs of each choice and identifying eco friendly and society friendly solutions that guarantee the respect of the right balance between human life and the dynamics of the Earth Communication and dissemination of geosciences should become core activities in building a knowledge based society which is able better to protect itself and the Earth ecosystems in order to guarantee a life in harmony with our planet for future generations
