a section on the theoretical underpinnings and empirical results of Grossman's groundbreaking health economics model first introduced in the 1970s followed by essays on the relationship between health and schooling determinants of infant health with a special emphasis on public policies and programs and the economics of unhealthy behaviors Grossman treats health as a form of human capital He shows that public policies and programs that determine the price and availability of key inputs have critical effects on outcomes ranging from birth weight and infant mortality to cigarette smoking alcohol abuse illegal drug use and obesity Grossman's approach has led to a major stream of literature in the field sparking contributions by the world's leading health economists including Joseph Newhouse Jonathan Gruber Amy Finkelstein Michael Greenstone and David Cutler His clarity on the role that economics play in people's good and bad health choices is immensely valuable to the debate over how we legislate and spend on health

Obesity Among Children Aged 6 to 12 Years. Causes and Risk Factors Patrick Kimuyu, 2017-11-21 Essay from the year 2016 in the subject Health Public Health grade 1 Egerton University language English abstract Obesity among children aged 6-12 years has become an enormous challenge to the global healthcare systems Currently the prevalence rate of obesity has reached the highest range in the past two decades and this is attributable to the low well-being and overall health among children which is estimated to have decreased by 37% compared to the case in 1970s Childhood obesity is distributed to all parts of the world even though western countries have long been associated with high prevalence but such trends seem to have changed Currently developing countries account for about 35 million obese and overweight children of the total 43 million globally Obesity among children poses risk to the future adult generation thus it requires appropriate intervention to reduce its burden It is believed that socio-economic factors are to blame for the high prevalence of childhood obesity For instance economic and educational statuses of households influence the lifestyle of family members especially with regard to dietary habits Therefore introducing health measures to promote health education among children and the young people in educational systems will help to reduce its prevalence in future thus reducing its burden
