Waves in Oceanic and Coastal Waters Leo H. Holthuijsen, 2010-02-04 *Waves in Oceanic and Coastal Waters* describes the observation analysis and prediction of wind generated waves in the open ocean in shelf seas and in coastal regions with islands channels tidal flats and inlets estuaries fjords and lagoons Most of this richly illustrated book is devoted to the physical aspects of waves After introducing observation techniques for waves both at sea and from space the book defines the parameters that characterise waves Using basic statistical and physical concepts the author discusses the prediction of waves in oceanic and coastal waters first in terms of generalised observations and then in terms of the more theoretical framework of the spectral energy balance He gives the results of established theories and also the direction in which research is developing The book ends with a description of SWAN Simulating Waves Nearshore the preferred computer model of the engineering community for predicting waves in coastal waters

Bayesian Hierarchical Space-Time Models with Application to Significant Wave Height Erik Vanem, 2013-10-11 This book provides an example of a thorough statistical treatment of ocean wave data in space and time It demonstrates how the flexible framework of Bayesian hierarchical space time models can be applied to oceanographic processes such as significant wave height in order to describe dependence structures and uncertainties in the data This monograph is a research book and it is partly cross disciplinary The methodology itself is firmly rooted in the statistical research tradition based on probability theory and stochastic processes However that methodology has been applied to a problem in the field of physical oceanography analyzing data for significant wave height which is of crucial importance to ocean engineering disciplines Indeed the statistical properties of significant wave height are important for the design construction and operation of ships and other marine and coastal structures Furthermore the book addresses the question of whether climate change has an effect of the ocean wave climate and if so what that effect might be Thus this book is an important contribution to the ongoing debate on climate change its implications and how to adapt to a changing climate with a particular focus on the maritime industries and the marine environment This book should be of value to anyone with an interest in the statistical modelling of environmental processes and in particular to those with an interest in the ocean wave climate It is written on a level that should be understandable to everyone with a basic background in statistics or elementary mathematics and an introduction to some basic concepts is provided in the appendices for the uninitiated reader The intended readership includes students and professionals involved in statistics oceanography ocean engineering environmental research climate sciences and risk assessment Moreover the book's findings are relevant for various stakeholders in the maritime industries such as design offices classification societies ship
