 Andy Priestner, Matt Borg, 2016-05-23 Modern library services can be incredibly complex Much more so than their forebears
 modern librarians must grapple daily with questions of how best to implement innovative new services while also maintaining
 and updating the old The efforts undertaken are immense but how best to evaluate their success In this groundbreaking new
 book from Routledge library practitioners anthropologists and design experts combine to advocate a new focus on User
 Experience or UX research methods Through a combination of theoretical discussion and applied case studies they argue
 that this ethnographic and human centred design approach enables library professionals to gather rich evidence based
 insights into what is really going on in their libraries allowing them to look beyond what library users say they do to what
 they actually do Edited by the team behind the international UX in Libraries conference User Experience in Libraries will
 ignite new interest in a rapidly emerging and game changing area of research Clearly written and passionately argued it is
 essential reading for all library professionals and students of Library and Information Science It will also be welcomed by
 anthropologists and design professionals working in related fields **Green Jobs for Sustainable Development**
 Ana-Maria Boromisa, Sanja Tišma, Anastasya Ležaić, 2015-06-26 A green economy must be built on green jobs the kind of
 employment that is low carbon intended to reduce energy use and expected to restore environmental quality But attempts to
 define exactly what a green job is have led to varied and often contradictory answers There are many unresolved questions
 including whether we consider jobs in the nuclear fuel industry to be green jobs Or is a worker at a glass making company
 which supplies the glass for the solar photovoltaic industry doing a green job given that glass making is a dirty industry This
 book deals with the relationship between green concepts green jobs green economy green growth and sustainable
 development It examines to which extent creation of green jobs supports overall economic development as opposed to
 creation of elitist jobs and greenwashing In order to do so general conceptual frameworks for green jobs green economy
 green growth and green policy are presented as well as their implementation in ten countries selected among the Group of
 Twenty The selection includes advanced the European Union the United States of America Australia Canada Republic of
 Korea Japan and developing countries Mexico China Turkey and Brazil The analysis presented in this book shows that
 although green concept is well intentioned its implementation depends on local circumstances economic political and social

Developed countries perceive green growth as a way to create new markets and demand while developing countries rely more on labor intensive growth and less expensive green jobs Thus greening the economy does not diminish differences between rich and poor This book is suitable for those who study and work in Ecological Economics Sustainable Development and Labor Economics *Tax, Inequality, and Human Rights* Philip Alston,Nikki Reisch,2019-04-11 In *Tax Inequality and Human Rights* experts in human rights law and in tax law debate the linkages between the two fields and highlight how each can help to tackle rapidly growing inequality in the economic social and political realms Against a backdrop of systemic corporate tax avoidance widespread use of tax havens persistent pressures to embrace austerity policies and growing gaps between the rich and poor this book encourages readers to understand fiscal policy as human rights policy and thus as having profound consequences for the well being of citizens around the world Prominent scholars and practitioners examine how the foundational principles of tax law and human rights law intersect and diverge discuss the cross border nature and human rights impacts of abusive practices like tax avoidance and evasion question the reluctance of states to bring transparency and accountability to tax policies and practices highlight the responsibility of private sector actors for shaping and misshaping tax laws and critically evaluate domestic tax rules through the lens of equality and nondiscrimination The contributing authors also explore how international human rights obligations should influence the framework for both domestic and international tax reforms They address what human rights law requires of state tax policies and how tax laws and loopholes affect the enjoyment of human rights by people outside a state s borders Because tax and human rights both turn on the relationship between the individual and the state neo liberalism s erosion of the social contract threatens to undermine them both **Names and Naming** Guy Puzey,Laura Kostanski,2016-02-02 This book explores international trends in naming and contributes to the growing field of onomastic enquiry Naming practices are viewed here through a critical lens demonstrating a high level of political and social engagement in relation to how we name people and places The contributors to this publication examine why names are not only symbols of a person or place but also manifestations of cultural linguistic and social heritage in their own right Presenting analyses of geographically and culturally diverse perspectives and case studies the book investigates how names can represent deeper kinds of identity act as objects of attachment and dependence and reflect community mores and social customs while functioning as powerful mechanisms of inclusion and exclusion The book will be of interest to researchers in onomastics sociology human geography linguistics and history *Smart Sensors and Systems* Chong-Min Kyung,Hiroto Yasuura,Yongpan Liu,Youn-Long Lin,2016-10-16 This book describes the technology used for effective sensing of our physical world and intelligent processing techniques for sensed information which are essential to the success of Internet of Things IoT The authors provide a multidisciplinary view of sensor technology from materials process circuits and big data domains and showcase smart sensor systems in real applications including smart home transportation medical environmental agricultural etc Unlike earlier books on sensors this

book provides a global view on smart sensors covering abstraction levels from device circuit systems and algorithms
