Proof and cyclic load conditioning of the SIP results in permanent deformation of the material hysteresis effects and much lighter tensile tangent modulus values at large strains Due to hysteresis effects a family of applicable stress strain curves are possible and curves bounding the family have been obtained for the SIP material The ultimate shear strength of the RSI and RTV was equal to or greater than published results The measured ultimate tensile strength of the SIP was in agreement with the published results for the higher load rate but was 20 percent lower for the low displacement rate tests
