Through her experience of teaching young professionals and editing their work, Dr Diskin has learned their unique set of needs and the book has been written in an attempt to address them. Dr Diskin addresses the reader in the second person with an ever supportive tone. Scientific English Robert A. Day, Nancy Sakaduski, 2011-06-16 This entertaining and highly readable book gives anyone writing in the sciences a clear and easy to follow guide to the English language. English is often regarded as one of the most difficult languages to master. Yet while the English language has a vocabulary of upwards of 500 000 words, it only uses nine parts of speech and all of these words fall into one or more of those nine categories. **Scientific English: A Guide for Scientists and Other Professionals** Third Edition contains many simple revelations like this that make effective scientific writing in English easy even for those whose fluency is in another language. The book is organized around a basic guide to English grammar that is specifically tailored to the needs of scientists, science writers, science educators and science students. The authors explain the goals of scientific writing, the role of style and the various kinds of writing in the sciences, then provide a basic guide to the fundamentals of English and address problem areas such as redundancies, abbreviations and acronyms, jargon and foreign terms. Email, online publishing, blogs and writing for the Web are covered as well. This book is designed to be an enlightening and entertaining read that can then be retained as a practical scientific writing reference guide.

Science Writing: an Interactive Field Guide for Students Paul Stupples, 2017-10-06 Scientific writing can be difficult. This is especially true for students at the beginning of their course when the challenge of coming to terms with the scientific or technical aspects of a subject seems more important than the need to write clearly and consistently. This interactive field guide will help you to identify and correct some of the mistakes commonly made by inexperienced writers and so ensure that your lab report, essay, term paper, dissertation or thesis has the best chance of achieving a high grade.

From Research to Manuscript Michael Jay Katz, 2009-08-29 Observations Plus Recipes. It has been said that science is the orderly collection of facts about the natural world. Scientists, however, are wary of using the word fact. Fact has the feeling of absoluteness and universality, whereas scientific observations are neither absolute nor universal. For example, 'children have 20 deciduous baby teeth' is an observation about the real world but scientists would not call it a fact. Some children have fewer deciduous teeth and some have more.

Even those children who have exactly 20 deciduous teeth use the full set during only a part of their childhood. When they are babies and toddlers children have less than 20 visible teeth and as they grow older children begin to lose their deciduous teeth which are then replaced by permanent teeth. Children have 20 deciduous baby teeth is not even a complete scientific statement. For one thing the statement children have 20 deciduous teeth does not tell us what we mean by teeth. When we say teeth do we mean only those that can be seen by the unaided eye or do we also include the hidden unerupted teeth. An observation such as children have 20 deciduous teeth is not a fact and by itself it is not acceptable as a scientific statement until its terms are explained scientifically. Children have 20 deciduous teeth must be accompanied by definitions and qualifiers.

Scientific Writing and Communication Angelika H. Hofmann, 2014. Scientific Writing and Communication: Papers, Proposals, and Presentations, Second Edition covers all the areas of scientific communication that a scientist needs to know and to master in order to successfully promote his or her research and career. This unique all in one handbook begins with a discussion of the basics of scientific writing style and composition and then applies these principles to writing research papers, review articles, grant proposals, research statements, and summaries and to preparing academic presentations and posters. It is ideal for a wide range of readers from upper level undergraduates and graduate students to postdoctoral fellows, faculty, and professional researchers in the life sciences, medicine, psychology, chemistry, physics, and engineering.

FEATURES A practical presentation carefully introduces basic writing mechanics before moving into manuscript planning and organizational strategies. Extensive hands-on guidance for composing scientific documents and presentations then follows. Relevant and multidisciplinary examples selected from real research papers and grant proposals by writers ranging from students to Nobel Laureates illustrate clear technical writing and common mistakes that one should avoid. Annotated text passages bring the writing principles and guidelines to life by applying them to real-world relevant and multidisciplinary examples. Extensive end of chapter exercise sets provide the opportunity to review style and composition principles and encourage readers to apply them to their own writing. Writing guidelines and revision checklists warn scientists against common pitfalls and equip them with the most successful techniques to revise a scientific paper, review article, or grant proposal. The book's clear, easy-to-follow writing style appeals to both native and non-native English speakers. Special ESL features also point out difficulties experienced primarily by non-native speakers. Tables and lists of sample sentences and phrases aid in composing different sections of a scientific paper, review article, or grant proposal. Thorough attention to research articles advises readers on composing successful manuscripts for publication in peer-reviewed journals from initial drafting to the response to reviewers. Comprehensive coverage of grant writing guides scientists through the entire process of applying for a grant from the initial letter of inquiry to proposal revision and submission.
