Science with Astronomical Near-Infrared Sky Surveys N. Epchtein, A. Omont, W.B. Burton, P. Persi, 2012-12-06 Outstanding progress in near infrared detection technology and in real time image processing has led astronomers to start undertaking all sky surveys in the 1-2 μm range project DENIS in Europe and 2MASS in the U S A surveys which will have a considerable impact in various areas of astronomy This book gathers the contributions of more than 80 specialists involved in fields of interest as different as low mass stars late stages of stellar evolution star formation stellar populations of the Galaxy and the Magellanic Clouds the local structure of the Universe and observational cosmology It describes the impact on these fields of the exhaustive data bases and catalogs of stars and galaxies that these surveys will provide The considerable interest of these documents for the future of infrared space and ground based projects and the complementarity with other currently ongoing or planned surveys in other spectral ranges are emphasized

Science with Adaptive Optics Wolfgang Brandner, 2005-04-11 The field of Adaptive Optics AO for astronomy has matured in recent years and diffraction limited image resolution in the near infrared is now routinely achieved by ground based 8 to 10m class telescopes This book presents the proceedings of the ESO Workshop on Science with Adaptive Optics held in the fall of 2003 The book provides an overview on AO instrumentation data acquisition and reduction strategies and covers observations of the sun solar system objects circumstellar disks substellar companions HII regions starburst environments late type stars the galactic center active galaxies and quasars The contributions present a vivid picture of the multitude of science topics being addressed by AO in observational astronomy
