Maps Revision Notes Mathematical Competencies in the Digital Era Uffe Thomas Jankvist,Eirini Geraniou,2023-02-20
This book focuses on the potential interplay between two distinct yet related paradigm shifts in mathematics education
drawing on the notion of networking of theories through illustrative case studies from the Danish educational system and
beyond The first paradigm shift is the massive introduction of digital technology in the teaching and learning of the subject
the second is a shift from the traditional focusing on mastering of skills and knowledge to being concerned with the
possession and development of mathematical competencies This book builds on the Danish KOM Competencies and the
Learning of Mathematics project which sources its description of mathematical mastery primarily on the notion of a
mathematical competency rather than on lists of topics concepts and results This allows for an overarching framework which
captures the perspectives of mathematics teaching and learning at whichever educational level While the KOM framework
does not in detail address the role of digital technologies in relation to its description of different types of mathematical
competencies etc the chapters of this book set out to do exactly this while in the process also drawing on a selection of other
theoretical constructs and frameworks from mathematics education research Starting with introductory chapters by key
researchers in the area the book brings forth chapters for each of the KOM framework s eight mathematical competencies
authored by Nordic researchers in combination with international scholars The KOM framework also operates with three
types of overview and judgement which are specifically addressed in relation to the role of digital technologies in the third
part of the book The fourth and final part of the book broadens the scene and provides chapters of a more perspective nature
in relation to mathematical competencies in the digital era The book s preface is by Susanne Prediger **Mathematics**
Assessment and Evaluation Thomas A. Romberg,1992-07-01 This books contains papers written on issues related to
externally mandated mathematics tests and their influence on school mathematics Chapter 1 presents an overview of the
book including brief abstracts of each chapter Chapter 2 presents a summary of the overall problems associated with the
need for valid information Remaining chapters include 3 Implications of the National Council of Teachers of Mathematics
