In the upper left part of this report, scores are printed for the tests, totals, and, if available, the composite. General types of scores are reported, including the national percentile rank (NPT), which is the percent of students in this grade in the nation with a lower score on that test, total, or composite.

The graph of NPT to the right of the scores provides a visual display of the student's performance on each test relative to the other tests. The horizontal bands help to show that each score is affected by a certain amount of error. Depending on the area taken, the shaded region on the graph represents the width of the band for the Core Total, the Composite, or the Survey Total, the score that best describes the student's overall achievement across tests. Bands that lie completely outside the shaded region indicate scores that are probably higher or lower than the score. Bands for various test scores also can be compared with one another. Those that overlap each other represent test performances that are probably fairly similar. When two bands do not overlap, those scores indicate performances that are probably different.

The lower part of the report provides detailed information about skills in each test area. The number of items for each skill, the number attempted, the percent correct for the student, and the percent correct for students in this grade in the nation are reported. The percentile rank of the percent correct score for the student is also displayed as a horizontal bar. The varying lengths of these bars permit identification of the student's stronger and weaker areas of achievement.

Dorans, Mary Pommerich, Paul W. Holland, 2007-10-15 In their preface to the second edition of Test Equating Scaling and Linking Mike Kolen and Bob Brennan 2004 made the following observation Prior to 1980 the subject of equating was ignored by most people in the measurement community except for psychometricians who had responsibility for equating p vii The authors went on to say that considerably more attention is now paid to equating indeed to all forms of linkages between tests and that this increased attention can be attributed to several factors 1 An increase in the number and variety of testing programs that use multiple forms and the recognition among professionals that these multiple forms need to be linked 2 Test developers and publishers in response to critics often refer to the role of linking in reporting scores 3 The accountability movement and fairness issues related to assessment have become much more visible Those of us who work in this field know that ensuring comparability of scores is not an easy thing to do Nonetheless our customers the test takers and score users either assume that scores on different forms of an assessment can be used interchangeably or like the critics above ask us to justify our comparability assumptions And they are right to do this After all the test scores that we provide have an impact on decisions that affect people's choices and their future plans From an ethical point of view we are obligated to get it right *Basic Skills*, 1979 United States. Statistical Methods in Education and Psychology A.K. Kurtz, S.T. Mayo, 2012-12-06 This book is intended for use in the elementary statistics course in Education or in Psychology While it is primarily designed for use in the first semester of a two semester course it may also be used in a one semester course There are not five or ten competing texts the number is much closer to fifty or a hundred Why then should we write still another one A new statistics text for use in Education and Psychology is to some slight extent comparable to a new translation or edition of the Bible Most of it has been said before but this time with a difference The present writers realize that elementary statistics students know very little about the subject even the meaning of it is all Greek to them This text covers the basic course in depth with examples using real data from the real world It of course contains the usual reference tables and several new ones it gives the appropriate formulas every time and it accurately depicts all graphs It is so comprehensive that if instructors can't find their own special areas of interest covered then those interests probably don't belong in a basic text *Improvement Opportunities for the Public Schools in the District of Columbia* United States. Congress. Senate. Committee on Governmental Affairs. Subcommittee on Oversight of

Government Management, Restructuring, and the District of Columbia, 1998 Learning from School Choice Paul E. Peterson, Bryan C. Hassel, 1998-07-01 While educators, parents, and policymakers are still debating the pros and cons of school choice, it is now possible to learn from choice experiments in public, private, and charter schools across the country. This book examines the evidence from these early school choice programs and looks at the larger implications of choice and competition in education. Paul Peterson makes a strong case for school choice in central cities, and coeditor Bryan Hassel offers the case for charter schools. John E. Brandl offers his vision of school governance in the next century. The book's other contributors, economists, political scientists, and education specialists, provide case studies of the experience with voucher programs in Indianapolis, San Antonio, Cleveland, and Milwaukee; survey charter schools; analyze public school choice; discuss constitutional issues; and study the effects of private education on democratic values. Contributors include David J. Armor, George Mason University; Chester E. Finn Jr. and Bruno V. Manno, Hudson Institute; Caroline M. Hoxby, Harvard University; Brett M. Peiser, Partnerships in Learning; and Joseph P. Viteritti, New York University.
