People and Computers

XIV — Usability or Else! Sharon McDonald, Yvonne Waern, Gilbert Cockton, 2012-12-06 Currently we are at the beginnings of widespread wireless connectivity and ubiquitous computing The Web is merging with a variety of technologies cell phones laptop computers hand held organisers information appliances and GPS and other sensors The capability for access anytime and anywhere is here The increasing frequency of cell phone calls at inappropriate times testifies that people no longer can easily control access Devices can determine where they are located and can make a range of information available to users as well as make users available to others or their devices We have proposed a general technique that promises to assist in mediating access It capitalises on advantages afforded by computation Hollan Stometta 1992 We first described the negotiation technique in the context of problems involved in scheduling meetings and then showed that similar issues which at first may seem unrelated but in fact have much in common arise in other contexts One such activity gaining immediate

access is currently of growing importance because of expanding connectivity via wireless technology Cell phones and related technologies make it possible to be constantly available for synchronous interaction At times this can be advantageous but the associated costs and benefits result in a complex tradeoff space for designers as well as users

Marine Navigation and Safety of Sea Transportation Adam Weintrit,2013-06-05 The TransNav 2013 Symposium held at the Gdynia Maritime University Poland in June 2013 has brought together a wide range of participants from all over the world The program has offered a variety of contributions allowing to look at many aspects of the navigational safety from various different points of view Topics presented and discussed at the Symposium were navigation safety at sea sea transportation education of navigators and simulator based training sea traffic engineering ship s manoeuvrability integrated systems electronic charts systems satellite radio navigation and anti collision systems and many others This book is part of a series of four volumes and provides an overview of Problems in Marine Navigation and is addressed to scientists and professionals involved in research and development of navigation safety of navigation and sea transportation

Dey,Hans Gellersen,Manfred Tscheligi,Reiner Wichert,Emile Aerts,Alejandro Buchmann,2007-11-03 This book constitutes the refereed proceedings of the First European Conference on Ambient Intelligence AmI 2007 held in Darmstadt Germany in November 2007 The 17 revised full papers presented together with five research reports were carefully reviewed and selected from 48 submissions The papers are organized in topical sections The book is rounded off by a section on case studies and lessons learned presenting a high level selection of current research reports and papers

MMS Daniel Ralph,Paul Graham,2004-04-21 MMS has evolved from the huge popularity of the SMS text service for GSM networks It is a departure from the transport mechanism used for SMS which is based on the GSM signalling channels to the use of IP to transport messages within the MMS network To this end MMS has similarities with Internet email and standard IETF protocols As with any new technology it is difficult to accurately predict the position within the next 5 years although based on previous experience with WAP and SMS it would be fair to say that these protocols will increase in usage over the next 5 years and become legacy for a further 5 years following which users will migrate onto the next wave of messaging Significant revenue growth and data usage is expected to be driven by consumer usage of MMS But MMS technology offers more than just a broadening of message content With MMS it is not only possible to send your multimedia messages from one phone to another but also from phone to email and vice versa This feature dramatically increases the possibilities of mobile communication both for private and corporate use Multimedia messaging will reshape the landscape of mobile communication making it more personal more versatile and more expressive than ever before MMS Is the first book to address how MMS and the use of IP to transport messages will affect existing infrastructure and business models Covers the fundamental changes to mail and billing systems Includes future recommendations such as interoperability and evolution Presents an overview of the MMS technology components Drawing on the authors hands on experience in the

implementation of MMS technology developing billing and delivering services at BT this innovative book will appeal to engineering managers network operators market analysts business decision makers content providers and operator organizations Natural Language Processing and Information Systems Farid Meziane, Elizabeth Métais, 2004-07-28

Welcome to NLDB04 the Ninth International Conference on the Application of Natural Language to Information Systems held at the University of Salford UK d ing June 23 25 2004 NLDB04 follows on the success of previous conferences held since 1995 Early conferences then known as Application of Natural Language to Databases hence the acronym NLDB were used as a forum to discuss and disseminate research on the integration of natural language and databases and were mainly concerned with natural language based queries database modelling and user interfaces that facilitate access to information The conference has since moved to encompass all aspects of Information Systems and Software Engineering Indeed the use of natural language in systems modelling has greatly improved the development process and benefited both developers and users at all stages of the software development process The latest developments in the field of natural language and the emergence of new technologies has seen a shift towards storage of large semantic electronic dictionaries their exploitation and the advent of what is now known as the semantic web Information extraction and retrieval document and content management ontology development and management and natural language conversational systems are becoming regular tracks in the last NLDB conferences NLDB04 has seen a 50% increase in the number of submissions and has established itself as one of the leading conferences in the area of applying natural language to information systems in its broader sense

Situational Project Management Oliver F. Lehmann, 2016-08-19 Most project managers would agree that every project is unique But not all project managers would agree that the best way to manage a unique project is unique Many still cling to the old practice of having a methodology that is applied to all projects One size fits all is still in common use and this approach has proven to lead to project failure Flexibility situational intelligence and creativity are essential to deliver project success The need to recognize and master ever changing requirements and environmental conditions is a tough challenge for professional project managers The same practices that led to success yesterday may cause failure today Selecting favorable responses to a given situation is often the most critical factor of the dynamics of success and failure This book is designed to help project professionals assess a situation predict the appropriate approach methodology and achieving styles and then apply them in a situational fashion To guide project managers in selecting the appropriate responses Situational Project Management SitPM shows how to assess a given project determine its unique characteristics and select the appropriate methods to complete the project With this book projects managers can use SitPM to develop profiles of their projects on the basis of the projects physical characteristics the project teams behavioral characteristics the enterprise environment and the market environments receiving project deliverables These profiles help project managers to determine the appropriate project life cycle approach and leadership style The book also explores various ways to engage stakeholders on the basis of a

project's SitPM profile The book's author Oliver F Lehmann has developed a set of templates to apply SitPM in practice It can be downloaded from www.oliverlehmann.com SitPM Templates zip

Wireless Network Design Jeff Kennington,Eli Olinick,Dinesh Rajan,2010-11-10 This book surveys state of the art optimization modeling for design analysis and management of wireless networks such as cellular and wireless local area networks LANs and the services they deliver The past two decades have seen a tremendous growth in the deployment and use of wireless networks The current generation wireless systems can provide mobile users with high speed data services at rates substantially higher than those of the previous generation As a result the demand for mobile information services with high reliability fast response times and ubiquitous connectivity continues to increase rapidly The optimization of system performance has become critically important both in terms of practical utility and commercial viability and presents a rich area for research In the editors previous work on traditional wired networks we have observed that designing low cost survivable telecommunication networks involves extremely complicated processes Commercial products available to help with this task typically have been based on simulation and or proprietary heuristics As demonstrated in this book however mathematical programming deserves a prominent place in the designer's toolkit Convenient modeling languages and powerful optimization solvers have greatly facilitated the implementation of mathematical programming theory into the practice of commercial network design These points are equally relevant and applicable in today's world of wireless network technology and design But there are new issues as well many wireless network design decisions such as routing and facility element location must be dealt with in innovative ways that are unique and distinct from wired fiber optic networks The book specifically treats the recent research and the use of modeling languages and network optimization techniques that are playing particularly important and distinctive roles in the wireless domain

Domain-Specific Modeling Steven Kelly,Juha-Pekka Tolvanen,2008-02-13 The authors are pioneers Few in our industry have their breadth of knowledge and experience From the Foreword by Dave Thomas Bedarra Labs Domain Specific Modeling DSM is the latest approach to software development promising to greatly increase the speed and ease of software creation Early adopters of DSM have been enjoying productivity increases of 500 1000% in production for over a decade This book introduces DSM and offers examples from various fields to illustrate to experienced developers how DSM can improve software development in their teams Two authorities in the field explain what DSM is why it works and how to successfully

create and use a DSM solution to improve productivity and quality Divided into four parts the book covers background and motivation fundamentals in depth examples and creating DSM solutions There is an emphasis throughout the book on practical guidelines for implementing DSM including how to identify the necessary language constructs how to generate full code from models and how to provide tool support for a new DSM language The example cases described in the book are available the book's Website www.dsmbook.com along with an evaluation copy of the MetaEdit tool for Windows Mac OS X and Linux which allows readers to examine and try out the modeling languages and code generators Domain Specific Modeling is an essential reference for lead developers software engineers architects methodologists and technical managers who want to learn how to create a DSM solution and successfully put it into practice *Ubiquitous Mobile Information and Collaboration Systems* Luciano Baresi, Schahram Dustdar, Harald Gall, Maristella Matera, 2005-03-01 Over recent years most business processes have changed in various dimensions e.g. mobility interconnectivity coordination style autonomy due to market conditions organizational models and usage scenarios of information systems Frequently information is relocated within a geographically distributed system according to rules that are only seldom defined as a well coded business process This creates the need for a software infrastructure that enables ubiquitous mobile and collaboration systems UMICS The anywhere anytime any means paradigm is becoming the major challenge in conceiving designing and releasing next generation information systems New technologies like Wi networks and 3rd generation mobile phones are offering the infrastructure to conceive of information systems as ubiquitous information systems that is systems that are accessible from anywhere at any time and with any device Ubiquity is not yet another buzzword pushed by emerging technologies but is mainly a means to support new business models and encourage new ways of working This new wave of UMICS will exploit the knowledge developed and deployed for conventional information systems but will also need new concepts models methodologies and supporting technologies to fully exploit the potentials of the enabling infrastructure and to be ready for the challenge Moreover people need to move across organizational boundaries and collaborate with others within an organization as well as between organizations The ability to query the company's distributed knowledge base and to cooperate with co-workers is still a requirement but mobility brings new access scenarios and higher complexity *Aligning Enterprise, System, and Software Architectures* Mistrik, Ivan, Tang, Antony, Bahsoon, Rami, Stafford, Judith A., 2012-10-31 This book covers both theoretical approaches and practical solutions in the processes for aligning enterprise systems and software architectures Provided by publisher [The Economics of Digital Transformation](#) Katarzyna Śledziewska, Renata Włoch, 2021-08-01 The unprecedented Covid 19 crisis revealed the scale and scope of a new type of economy taking shape in front of our very eyes the digital economy This book presents a concise theoretical and conceptual framework for a more nuanced analysis of the economic and sociological impacts of the technological disruption that is taking place in the markets of goods and services labour markets and the global economy more generally This interdisciplinary work is a must for

researchers and students from economics business and other social science majors who seek an overview of the main digital economy concepts and research Its down to earth approach and communicative style will also speak to businesses practitioners who want to understand the ongoing digital disruption of the market rules and emergence of the new digital business models The book refers to academic insights from economics and sociology while giving numerous empirical examples drawn from basic and applied research and business It addresses several burning issues how are digital processes transforming traditional business models Does intelligent automation threaten our jobs Are we reaching the end of globalisation as we know it How can we best prepare ourselves and our children for the digitally transformed world The book will help the reader gain a better understanding of the mechanisms behind the digital transformation something that is essential in order to not only reap the plentiful opportunities being created by the digital economy but also to avoid its many pitfalls Chapters 1 3 and 5 of this book are available for free in PDF format as Open Access from the individual product page at www.routledge.com They have been made available under a Creative Commons Attribution Non Commercial No Derivatives 4 0 license
