Future,2007-10-01 Natural and human induced changes in Earth's interior, land surface, biosphere, atmosphere, and oceans affect all aspects of life. Understanding these changes requires a range of observations acquired from land, sea, air, and space-based platforms. To assist NASA, NOAA, and USGS in developing these tools, the NRC was asked to carry out a decadal strategy survey of Earth science and applications from space that would develop the key scientific questions on which to focus Earth and environmental observations in the period 2005-2015 and beyond and present a prioritized list of space programs, missions, and supporting activities to address these questions. This report presents a vision for the Earth science program, an analysis of the existing Earth Observing System, and recommendations to help restore its capabilities, an assessment of and recommendations for new observations and missions for the next decade, an examination of and recommendations for effective application of those observations, and an analysis of how best to sustain that observation and applications system.

Solid-Earth Sciences and Society National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on the Status and Research Objectives in the Solid-Earth Sciences,1993-02-01 As environmental problems move upward on the public agenda, our knowledge of the earth's systems and how to sustain the habitability of our world becomes more critical. This volume reports on the state of earth science and outlines a research agenda with priorities keyed to the real-world challenges facing human society. The product of four years of development with input from more than 200 earth science specialists, the volume offers a wealth of historical background and current information on Plate tectonics, volcanism, and other heat-generated earth processes. Evolution of our global environment and of life itself as revealed in the fossil record. Human exploitation of water, fossil fuels, and minerals. Interaction between human populations and the earth's surface, discussing the role we play in earth's systems and the dangers we face from natural hazards such as earthquakes and landslides. This volume offers a comprehensive look at how earth science is currently practiced and what should be done to train professionals and adequately equip them to find the answers necessary to manage more effectively the earth's systems. This well-organized and practical book will be of immediate interest to solid earth scientists, researchers, and college and high school faculty, as well as policymakers in the environmental arena.
