Reframing Economics Roger A McCain, 2014-03-28 The objectives of this book are twofold Firstly it proposes that economics should be defined as a study of imperfect cooperation Secondly it elucidates the continuities that extend from classical political economy through the neoclassical Keynesia

Formality of the Little $\mathbb{N}\mathbb{S}$ -disks Operad Pascal Lambrechts, Ismar Volić, 2014-06-05 The little disks operad along with its variants is an important tool in homotopy theory It is defined in terms of configurations of disjoint dimensional disks inside the standard unit disk in and it was initially conceived for detecting and understanding fold loop spaces Its many uses now stretch across a variety of disciplines including topology algebra and mathematical physics In this paper the authors develop the details of Kontsevich's proof of the formality of little disks operad over the field of real numbers More precisely one can consider the singular chains on as well as the singular homology of These two objects are operads in the category of chain complexes The formality then states that there is a zig zag of quasi isomorphisms connecting these two operads The formality also in some sense holds in the category of commutative differential graded algebras The authors additionally prove a relative version of the formality for the inclusion of the little disks operad in the little disks operad when

Irreducible Geometric Subgroups of Classical Algebraic Groups Timothy C. Burness,, Soumaïa Ghandour, Donna M. Testerman, 2016-01-25 Let G be a simple classical algebraic group over an algebraically closed field of characteristic p with natural module V Let H be a closed subgroup of G and let ρ be a non trivial irreducible tensor indecomposable restricted rational module such that the restriction of ρ to H is irreducible In this paper the authors classify the triples of this form where H is a disconnected maximal positive dimensional closed subgroup of G preserving a natural geometric structure on V

A Vector Field Method on the Distorted Fourier Side and Decay for Wave Equations with Potentials Roland Donninger, Joachim Krieger, 2016-04-26 The authors study the Cauchy problem for the one dimensional wave equation $\partial_t^2 u - \partial_x^2 u + V(x)u = 0$ The potential V is assumed to be smooth with asymptotic behavior $V(x) \sim |x|^{-2}$ as $|x| \rightarrow \infty$ They derive dispersive estimates energy estimates and estimates involving the scaling vector field $t \partial_t + x \partial_x$ where the latter are obtained by employing a vector field method on the distorted Fourier side In addition they prove local energy decay estimates Their results have immediate applications in the context of geometric evolution problems The theory developed in this paper is fundamental for the proof of the co dimension 1 stability of the catenoid under the vanishing mean curvature flow in Minkowski space see Donninger Krieger Szeftel and Wong Codimension one stability of the catenoid under the vanishing mean curvature flow in Minkowski space preprint arXiv 1310.5606 2013

Machine Design with CAD and Optimization Sayed M. Metwalli, 2021-04-08 MACHINE DESIGN WITH CAD AND OPTIMIZATION A guide to the new CAD and optimization tools and skills to generate real design synthesis of machine elements and systems Machine Design with CAD and Optimization offers the basic tools to design or synthesize machine elements and assembly of prospective elements in systems or products It contains the necessary knowledge base computer aided design and optimization tools to define appropriate geometry and material selection of machine elements A comprehensive text for each element includes a chart excel sheet a MATLAB program or an interactive program to calculate the element geometry to guide in the selection of the appropriate material The book contains an introduction to machine design and includes several design factors for

consideration It also offers information on the traditional rigorous design of machine elements In addition the author reviews the real design synthesis approach and offers material about stresses and material failure due to applied loading during intended performance This comprehensive resource also contains an introduction to computer aided design and optimization This important book Provides the tools to perform a new direct design synthesis rather than design by a process of repeated analysis Contains a guide to knowledge based design using CAD tools software and optimum component design for the new direct design synthesis of machine elements Allows for the initial suitable design synthesis in a very short time Delivers information on the utility of CAD and Optimization Accompanied by an online companion site including presentation files Written for students of engineering design mechanical engineering and automotive design Machine Design with CAD and Optimization contains the new CAD and Optimization tools and defines the skills needed to generate real design synthesis of machine elements and systems on solid ground for better products and systems Multivariate, Multilinear and Mixed Linear Models Katarzyna Filipiak, Augustyn Markiewicz, Dietrich von Rosen, 2021-10-01 This book presents the latest findings on statistical inference in multivariate multilinear and mixed linear models providing a holistic presentation of the subject It contains pioneering and carefully selected review contributions by experts in the field and guides the reader through topics related to estimation and testing of multivariate and mixed linear model parameters Starting with the theory of multivariate distributions covering identification and testing of covariance structures and means under various multivariate models it goes on to discuss estimation in mixed linear models and their transformations The results presented originate from the work of the research group Multivariate and Mixed Linear Models and their meetings held at the Mathematical Research and Conference Center in Białe Pole Poland over the last 10 years Featuring an extensive bibliography of related publications the book is intended for PhD students and researchers in modern statistical science who are interested in multivariate and mixed linear models **On Sudakov's Type Decomposition of Transportation Plans with Norm Costs** Stefano Bianchini, Sara Daneri, 2018-02-23 The authors consider the original strategy proposed by Sudakov for solving the Monge transportation problem with norm cost with probability measures in and absolutely continuous w.r.t The key idea in this approach is to decompose via disintegration of measures the Kantorovich optimal transportation problem into a family of transportation problems in where are disjoint regions such that the construction of an optimal map is simpler than in the original problem and then to obtain by piecing together the maps When the norm is strictly convex the sets are a family of dimensional segments determined by the Kantorovich potential called optimal rays while the existence of the map is straightforward provided one can show that the disintegration of and thus of on such segments is absolutely continuous w.r.t the dimensional Hausdorff measure When the norm is not strictly convex the main problems in this kind of approach are two first to identify a suitable family of regions on which the transport problem decomposes into simpler ones and then to prove the existence of optimal maps In this paper the authors show how these difficulties can be overcome and that the original idea of Sudakov can

be successfully implemented The results yield a complete characterization of the Kantorovich optimal transportation problem whose straightforward corollary is the solution of the Monge problem in each set and then in The strategy is sufficiently powerful to be applied to other optimal transportation problems *Foundations of Homeland Security* Martin J.

Alperen,2017-01-10 The Complete Guide to Understanding the Structure of Homeland Security Law New topics featuring leading authors cover topics on Security Threats of Separatism Secession and Rightwing Extremism Aviation Industry s Crew Resource Management Principles and Ethics Legal and Social Issues in Homeland Security Legal and Social Issues in Homeland Security In addition the chapter devoted to the Trans Pacific Partnership is a description of economic statecraft what we really gain from the TPP and what we stand to lose The Power of Pop Culture in the Hands of ISIS describes how ISIS communicates and how pop culture is used expertly as a recruiting tool Text organized by subject with the portions of all the laws related to that particular subject in one chapter making it easier to reference a specific statute by topic Allows the reader to recognize that homeland security involves many specialties and to view homeland security expansively and in the long term Includes many references as a resource for professionals in various fields including military government first responders lawyers and students Includes an Instructor Manual providing teaching suggestions discussion questions true false questions and essay questions along with the answers to all of these *Curvature: A Variational Approach* A.

Agrachev,D. Barilari,L. Rizzi,2019-01-08 The curvature discussed in this paper is a far reaching generalization of the Riemannian sectional curvature The authors give a unified definition of curvature which applies to a wide class of geometric structures whose geodesics arise from optimal control problems including Riemannian sub Riemannian Finsler and sub Finsler spaces Special attention is paid to the sub Riemannian or Carnot Carath odory metric spaces The authors construction of curvature is direct and naive and similar to the original approach of Riemann In particular they extract geometric invariants from the asymptotics of the cost of optimal control problems Surprisingly it works in a very general setting and in particular for all sub Riemannian spaces A Note on Square Neutrosophic Fuzzy Matrices Mamouni

Dhar,Said Broumi,Florentin Smarandache, In this article we shall define the addition and multiplication of two neutrosophic fuzzy matrices Thereafter some properties of addition and multiplication of these matrices are also put forward **A**

Process Theory of Organization Tor Hernes,2014 This book presents a novel and comprehensive process theory of organization applicable to a world on the move where connectedness prevails over size flow prevails over stability and temporality prevails over spatiality The process theory developed in the book draws upon process thinking in a number of areas including process philosophy pragmatism phenomenology and science and technology studies Salient ideas from these schools are carefully woven into a process theory of organization which makes the book not only a thought provoking theoretical contribution but also a much needed glimpse into the challenges faced by organizers Taking a distinctly temporal view of organizational life the author shows how actors operate in an on going present in which they draw upon their past

and project their past as ambitions for the future This on going work in which technologies concepts and social actors take part is crucial for the making of any type of organizational formation A key construct of the book is that of events which provide force movement and continuity to organizational life The book is suitable for scholars and advanced level students in organization studies management studies technology studies and sociology It contains a number of practical examples to illustrate the theoretical framework

Descent Construction for $GSpin$ Groups Joseph Hundley, Eitan Sayag, 2016-09-06

In this paper the authors provide an extension of the theory of descent of Ginzburg Rallis Soudry to the context of essentially self dual representations that is representations which are isomorphic to the twist of their own contragredient by some Hecke character The authors theory supplements the recent work of Asgari Shahidi on the functorial lift from split and quasisplit forms of $GSpin_{2n}$ to GL_{2n}
