Laboratory Manual to accompany Stern's Introductory Plant Biology James Bidlack, Kingsley Stern, 2007-03-30 This laboratory manual assumes no previous knowledge of the biological sciences on the part of the student. It is designed for use in a one semester or one quarter introductory course in plant biology and shorter introductory botany courses open to both nonmajors and majors. Both the principles of biology and the scientific method are introduced using plants as illustrations. The exercises demonstrate the underlying unity of all living organisms at the cellular level. The manual is designed so that students can work more or less independently. Instructors are free to require different drawings or other assignments and may also omit some of those suggested within each exercise. Students are encouraged to read the laboratory exercise before coming to class. Laboratory preparation quizzes are provided at the end of each exercise. Answers to the laboratory preparation quizzes are discernible within the particular exercises and should not require checking other sources. Each exercise includes suggested learning goals and exercise review questions. Answers to the lab manual exercise review questions can be found on the Online Learning Center that accompanies the Eleventh Edition textbook. **Laboratory Manual for Plant Biology** Gerald Webber Prescott, 1932 **Botany: An Introduction to Plant Biology** James D. Practical Botany Joseph Young Bergen, Otis William Caldwell, 1911 Excerpt from Practical Botany There are already so many books embodying elementary courses in botany that whoever offers another should give reasons for so doing As here set forth the study of plants is related to everyday life more closely than is usually done Those aspects of plant life are presented which have the largest significance to the public in general and which are of interest and educative value to beginning students The book includes the principles of plant nutrition the relation of plant nutrition to soils and climate and to the food of animals and men it discusses some of those diseases of plants animals and men which are produced by parasitic plants the propagation of plants plant breeding forestry and the main uses of plants and plant products are given in an elementary way The elements of plant life and structure are presented synthetically rather than by use of the special divisions of botanical study which are more helpful to advanced students than to beginners It is believed that this mode of treatment stimulates and develops a scientific method of thinking by directing attention to the plant as a living unit and a citizen of the plant world No attempt is made to include references to such recent discoveries in the field of botany as are botanically significant but not important for elementary instruction Chapters I and II are so arranged that a student may secure a general introductory appreciation of the significance of plant structure and work It is intended that Chapter I should be used as a means of raising questions concerning the place of plants in nature Chapter II presents an outline of the five dominant structures of seed plants and the kind of work that is done by each Laboratory Exercises in Plant Pathology: An Instructional Kit (Teachers Manual) A.B.A.M.
