history of computing important Given that the computer as we now know it came into existence less than 70 years ago it might seem a little odd to some people that we are concerned with its history Isn't history about old things Computing of course goes back much further than 70 years with many earlier vices rightly being known as computers and their history is of course important It is only the history of electronic digital computers that is relatively recent History is often justified by use of a quote from George Santayana who famously said that Those who cannot remember the past are condemned to repeat it It is arguable whether there are particular mistakes in the history of computing that we should avoid in the future but there is some circularity in this question as the only way we will know the answer to this is to study our history This book contains papers on a wide range of topics relating to the history of computing written both by historians and also by those who were involved in creating this history The papers are the result of an international conference on the History of Computing that was held as a part of the IFIP World Computer Congress in Brisbane in September 2010
