

ACTIVITY 5.4

A Russian Fable

This is the method traditionally used in some Russian villages to see which of the girls in the village are to be married next year! You take three blades of grass, folded in two, and hold them in your hand so that the six ends are hanging down. A young girl ties the ends together in pairs. If, on release, a large loop is formed, the girl will be married next year.

1. What are the possible outcomes for this experiment in terms of small, medium and large loops?
2. By labelling the six ends (say a and A for the two ends of one blade of grass), consider all the possible outcomes and hence find the probability of getting the large loop.
3. Test your predicted probabilities by using short lengths of string and getting the class to work in pairs, recording their answers. Collect all the data together and use it to work out the experimental probabilities. Compare these to the theoretical values found in question 2.
4. If a Russian village has 30 young girls and they all go through this ritual, how many do you estimate will be predicted to marry next year?
