Structural Applications of Concrete with Recycled Solid Wastes and Alternatives for Cement Biao Hu,Jianping Lin, Nicola Nistico,Rui Hu,2025-05-27 The development and application of

sustainable construction materials are crucial steps toward creating environmentally friendly and low carbon buildings. However, on the one hand, the significant increase in solid construction waste has raised global environmental concerns. On the other hand, the shortage of raw materials in concrete production has triggered concern about whether they can meet the escalating demand. To address these issues, sustainable construction material is a promising direction such as recycled aggregate concrete, geopolymer concrete, limestone calcined clay cement (LC3) concrete, etc. In order to promote the application of sustainable construction materials in practical engineering, it is essential to study the structural behavior and durability of structures made with sustainable construction materials. Structural design methods can be proposed based on AI technology to improve the efficiency in the utilization of sustainable construction materials.
