Velarde, Roman Yu. Tarakanov, Alexey V. Marchenko, 2018-03-28 This book commemorates the 70th birthday of Eugene Morozov the noted Russian observational oceanographer It contains many contributions reflecting his fields of interest including but not limited to tidal internal waves ocean circulation deep ocean currents and Arctic oceanography Special attention is paid to studies on internal waves and especially those on tidal internal waves in the Global Ocean These papers describe the most important open problems concerning experimental studies of internal waves and their theoretical numerical and laboratory modeling Further contributions investigate the physics of surface waves and their interaction with internal waves Here the focus is on describing interaction processes between internal waves and deep currents in the ocean especially currents of Antarctic Bottom Water in abyssal fractures They also touch on the problem of oceanic circulation and related processes in fjords including those occurring under sea ice Given its breadth of coverage the book will appeal to anyone interested in a survey of ocean dynamics ranging from historic perspectives to modern research topics      **UNEP Year Book 2011**, 2011 The 8th Edition of the UN Environment Programme flagship report The UNEP Year Book 2011 examines global emerging issues and provides the latest environmental science it also highlights major environmental events and developments over the past year and presents the most recent data and indicator trends The ocean has become a global repository for much of the waste we produce Scientists are concerned that plastic debris in the ocean can transport toxic substances which may end up in the food chain causing potential harm to ecosystems and human health The Year Book also explores the wider implications of the use of phosphorus in food production Phosphorus is an essential nutrient whose supply is limited Since demand for fertilizer

in agriculture rocketed in the 20th century large amounts of phosphorus are flowing into the environment New perspectives are also emerging on how biodiversity conservation can be integrated in forest management Forests are receiving increasing attention not least because of their role in climate change mitigation Halting loss of forest biodiversity is essential if forests are to adapt to mounting pressures including climate change and pest outbreaks The Year Book s overview of events and developments during 2010 shows how cutting edge science reveals new opportunities to mitigate climate change while improving air quality Stimulated by technological innovation and green investments renewable energy supply is growing rapidly This and other developments are summarized in key environmental indicators that present the latest data and trends

For The global environment *Oceans* Guy Jacques,Paul Tréguer,Herlé Mercier,2021-03-05 Since the HMS Challenger expedition of 1872 1876 our vision of the ocean has changed completely We now understand that it plays a key role in biodiversity climate regulation and mineral and biological resources and as such the ocean is a major service provider for humanity *Oceans* draws on data from new oceanographic and satellite tools acquired through international interdisciplinary programs It describes the processes that control how the ocean functions on different spatial and temporal scales After considering the evolution of concepts in physical chemical and biological oceanography the book outlines the future of a warmer acidified less oxygenated ocean It shows how a view of the ocean at different scales changes how we understand it Finally the book presents the challenges facing the ocean in terms of the exploitation of biological and mineral resources in the context of sustainable development and the regulation of climate change

apprehend waves materiality through abstractions seeking to capture in technical language these avatars of nature at once periodic and irreversible wild and pacific ephemeral and eternal For researchers and their publics the meanings of waves also reflect visions of the ocean as an environmental infrastructure fundamental to trade travel warfare humanitarian rescue recreation and managing sea level rise Interleaving ethnographic chapters with reflections on waves in mythology surf culture feminist theory film Indigenous Pacific activisms Black Atlantic history cosmology and more Helmreich demonstrates how waves mark out the wakes and breaks of social histories and futures

Consalvey, Ashley A. Rowden, 2016-04-18 The deep sea covers over 60% of the surface of the earth yet less than 1% has been scientifically investigated There is growing pressure on deep sea resources and on researchers to deliver information on biodiversity and the effects of human impacts on deep sea ecosystems Although scientific knowledge has increased rapidly in recent decades there exist large gaps in global sampling coverage of the deep sea and major efforts continue to be directed into offshore research Biological Sampling in the Deep Sea represents the first comprehensive compilation of deep sea sampling methodologies for a range of habitats It reviews the real life applications of current and in some instances developing deep sea sampling tools and techniques In creating this book the authors have been able to draw upon the experiences of those at the coal face of deep sea sampling expanding on the existing methodological texts whilst encompassing a level of technical detail often omitted from journal publications Ultimately the book will promote international consistency in sampling approaches and data collection advance the integration of information into global databases and facilitate improved data analyses and consequently uptake of science results for the management and conservation of the deep sea environment The book will appeal to a range of readers including students early career through to seasoned researchers as well as environmental managers and policy makers wishing to understand how the deep sea is sampled the challenges associated with deep survey work and the type of information that can be obtained

This volume presents scientific findings from the period between 2000 and 2010; it follows on from Memoir 21 which focused on the early years of activity between 1995 and 1999. In addition to descriptions and analysis of the growth, collapse, and explosions associated with lava domes, there are papers on the deformation of the volcano caused by the deep magma, the petrology and geochemistry of the lavas and associated gases. Of particular note are an overview of the insights into the deep structure of the volcano that resulted from a major international seismic tomography experiment and an analysis of the quantitative risk assessment process that has run now for most of the eruption, the longest such continuous assessment in the world.
