National individual tree species atlas ,2015 *Embedded Systems Design with Platform FPGAs* Ronald Sass, Andrew G. Schmidt, 2010-09-10 Embedded Systems Design with Platform FPGAs introduces professional engineers and students alike to system development using Platform FPGAs The focus is on embedded systems but it also serves as a general guide to building custom computing systems The text describes the fundamental technology in terms of hardware software and a set of principles to guide the development of Platform FPGA systems The goal is to show how to systematically and creatively apply these principles to the construction of application specific embedded system architectures There is a strong focus on using free and open source software to increase productivity Each chapter is organized into two parts The white pages describe concepts principles and general knowledge The gray pages provide a technical rendition of the main issues of the chapter and show the concepts applied in practice This includes step by step details for a specific development board and tool chain so that the reader can carry out the same steps on their own Rather than try to demonstrate the concepts on a broad set of tools and boards the text uses a single set of tools Xilinx Platform Studio Linux and GNU throughout and uses a single developer board Xilinx ML 510 for the examples Explains how to use the Platform FPGA to meet complex design requirements and improve product performance Presents both fundamental concepts together with pragmatic step by step instructions for building a system on a Platform FPGA Includes detailed case studies extended real world examples and lab exercises

Grasslands of the World Victor R. Squires, Jürgen

Dengler, Limin Hua, Haiying Feng, 2018-09-05 This book begins with a brief account of the extraordinary sequence of events that led to emergence of grasslands as major vegetation formations that now occupy some of the driest and hottest and the highest and coldest on earth as well as vast steppes and prairies in more temperate climates. It is the story of grasses successfully competing with forests and woodlands aided and abetted by grazing herbivores and by humans and their use of fire as a tool. It is a story of adaptation to changing climates and the changing biophysical environments. A major focus of the book is the Palaearctic biogeographic realm that extends over some 45 million km² and thus more than 1/3 of the terrestrial ice-free surface on Earth. It comprises extensive grasslands of different types and origin which can be subdivided into 1 natural grasslands with 1a steppes climatogenic in dry climates 1b arctic alpine grasslands climatogenic in cold climates and 1c azonal and extrazonal grasslands pedogenic and topogenic as well as 2 secondary grasslands created and sustained by human activities such as livestock grazing mowing or burning. Grasslands of the Palaearctic do not only form a major basis for the agriculture of the region and thus its food supply but are also crucial for other ecosystem services and host a supra-proportional part of the realm's plant and animal diversity. To reflect that suitability of grasslands for biodiversity strongly depends on their state we apply the term High Nature Value grassland to those natural grasslands that are not degraded in good state and those secondary grasslands that are not intensified semi-natural. The situation in a variety of countries where grasslands are evolving under the influence of global climate change is also considered. Case studies are presented on Southern Africa Eastern Africa India China South America North America and Australia. The concluding chapter examines a set of themes arising from the chapters that make up the bulk of this book. The following provide a focus: recent history of grassland biomes brief recap of current thinking and recent trends with special reference to dry grasslands in the Palearctic regions the current status of grasslands and germplasm resources biodiversity an overview management systems that ensure sustainability how to recover degraded grasslands socio-economic issues and considerations in grassland management the impacts of environmental problems in grasslands such as future climate change and intensification and the problems prospects facing pastoralists and other grassland-based livestock producers. The Better Angels of Our Nature Steven Pinker, 2011-10-04 If I could give each of you a graduation present it would be this the most inspiring book I've ever read. Bill Gates May 2017 Selected by The New York Times Book Review as a Notable Book of the Year. The author of *Rationality and Enlightenment Now* offers a provocative and surprising history of violence. Faced with the ceaseless stream of news about war crime and terrorism one could easily think we live in the most violent age ever seen. Yet as New York Times bestselling author Steven Pinker shows in this startling and engaging new work just the opposite is true: violence has been diminishing for millennia and we may be living in the most peaceful time in our species' existence. For most of history war slavery infanticide child abuse assassinations programs gruesome punishments deadly quarrels and genocide were ordinary features of life. But today Pinker shows with the help of more than a hundred graphs and maps all these forms of violence have

dwindled and are widely condemned How has this happened This groundbreaking book continues Pinker s exploration of the esesnce of human nature mixing psychology and history to provide a remarkable picture of an increasingly nonviolent world The key he explains is to understand our intrinsic motives the inner demons that incline us toward violence and the better angels that steer us away and how changing circumstances have allowed our better angels to prevail Exploding fatalist myths about humankind s inherent violence and the curse of modernity this ambitious and provocative book is sure to be hotly debated in living rooms and the Pentagon alike and will challenge and change the way we think about our society *Rivers - Physical, Fluvial and Environmental Processes* Paweł Rowiński, Artur Radecki-Pawlik, 2015-07-02 This book describes the domain of research and investigation of physical chemical and biological attributes of flowing water and it deals with a cross disciplinary field of study combining physical geophysical hydraulic technological environmental interests It aims to equip engineers geophysicists managers working in water related arenas as well as advanced students and researchers with the most up to date information available on the state of knowledge about rivers particularly their physical fluvial and environmental processes Information from various but also interrelated areas available in one volume is the main benefit for potential readers All chapters are prepared by leading experts from the leading research laboratories from all over the world
