Network consultants and engineers in today's industry continually face the challenge of assessing, auditing and reviewing existing networks. Documenting, reviewing and analyzing these changes in a customer's network is more challenging today than in the past, partly because of the explosive growth of converged applications and the Internet. Consultants and engineers often reinvent the wheel to gather and analyze relevant network information, particularly when examining a client's network while having little or no background information. *Network Consultants Handbook* is a complete resource for assessing, auditing, analyzing and evaluating any network environment. Intended for anyone who designs, manages, sells, administers or desires to understand various internetworking technologies, *Network Consultants Handbook* demonstrates where and how to gather relevant information and how to analyze and document this information. Technology overviews peel away each layer of the network to provide a complete assessment. This book prepares you with form templates to complete during a network audit, necessary device commands to aid in obtaining necessary information, and consistent forms to aid in documentation. Networks are like snowflakes: No two are alike. This is the challenge that network consultants, engineers, managers, designers and anyone else involved with networks must face every day. *Network Consultants Handbook* provides the resources you need to evaluate and design networks, either as a desktop reference resource or in the field, where the tables and calculations help provide near real-time answers to internetworking issues and challenges. Companion Web Site: The companion Web site for the book contains fully downloadable versions of the data gathering and analysis templates. These templates offer an easy-to-complete solution to gathering the data you need to complete your analysis of network environments. This book is part of the Cisco Press Networking Technologies Series, which offers networking professionals valuable information for constructing efficient networks, understanding new technologies and building successful careers.

Optical Communications And Networks (With Cd-rom): Proceedings Of The First International Conference On Icofn 2002 Cambyse Guy Omidyar, W D Zhong, Hooshang Ghafouri-Shiraz, 2002-10-23 Optical communications networks are becoming increasingly important as there is demand for high capacity links. Dense wavelength division multiplexing (DWDM) is widely deployed at the core networks to accommodate high capacity transport systems. Optical components such as optical amplifiers, tunable filters, transceivers, termination devices and add-drop multiplexers are becoming more reliable and affordable. Access and metropolitan area networks are increasingly built with optical technologies to overcome the electronic bottleneck at network edges. New
