

Dow Agrosciences

Rodeo®

HERBICIDE

This product is a selective herbicide used to control weeds in corn, soybeans, and sorghum. It is applied as a foliar spray or granular formulation. The active ingredient is glyphosate, which inhibits the growth of weeds by blocking the production of certain amino acids. Rodeo is effective against a wide range of broadleaf weeds and some grasses. It is important to follow the label instructions for application, including the recommended rate and timing, to ensure optimal results and minimize the risk of injury to the crop.
