Systems Models H. S. Ostrowsky,J. R. Garbarino,P. J. Redmond,R. E. Rein,GENERAL RESEARCH CORP SANTA BARBARA CALIF.,1975 This volume describes the systems content of the ROSCOE code The systems model as defined here consists of these major blocks attack generation object observables sensor platforms track filter radar event logic radar signal processing and radar propagation The objective in building the systems model was to provide a very generalized set of routines which could be used by a variety of users for a variety of applications As a result the user can select from among a number of options to simulate a particular engagement For example any number of different object types radar types and weapon types can be specified in a single run In addition launch and impact points can be mixed to generate complex attacks

The ROSCOE Manual. Volume 16. High-Altitude Neutral-Particle Motion Daniel A. Hamlin,Curtis A. Smith,Melvin R. Schoonover,Jon Y. Wang,GENERAL RESEARCH CORP SANTA BARBARA CALIF.,1975 Two preliminary alternative models of the high altitude h or 90 km neutral particle motion have been adopted for use in ROSCOE Both models are one dimensional spherical Lagrangian models and describe the vertical hydrodynamic motion in each geocentric column in an array of perhaps 100 such continuous but independent columns covering the disturbed region of interest The models SAIHYD NRLHYD describe the motion of a set of either Lagrangian cells or points by using the method of either difference equations or differential quadrature respectively Both models have automatic rezone capability The geocentric columns defining the geometry for the calculations are described in terms of an arbitrarily positioned and oriented quadrupole coordinate system Each Lagrangian cell or point is characterized by not only the hydrodynamic properties but also a set of chemistry quantities The chemistry is loosely coupled to the hydrodynamics Herein are presented details of the quadrupole coordinate system the working form of the hydrodynamic equations and their initialization and methods for solution the results of a test problem for a large yield event at 200 km altitude producing motion in a linear array of six columns Author **ROSCOE Applied Data Research, Inc**,1976 **The Roscoe Manual. Volume 3: Program Structure** J. R. Garbarino,M. L. Fickett,J. J. Baltes,GENERAL RESEARCH CORP SANTA BARBARA CALIF.,1975 The ROSCOE computer code is designed specifically to be the laboratory standard for evaluating nuclear effects on radar systems The program provides a means for 1 evaluating radar acquisition discrimination and tracking performance in a nuclear environment 2 measuring various propagation error

sources and 3 computing specific phenomenological data The ROSCOE users manual is divided into four volumes Volume 1 Program Description Volume 2 Sample Cases Volume 3 Program Structure Volume 4 Systems Models Volume 3 presents structural details of the code such as the subroutine structure and dataset structure for the programmer user Roscoe User Guide Raphael A.
