Tadmor, Costas G. Gogos, 2013-12-02 Thoroughly revised edition of the classic text on polymer processing The Second Edition brings the classic text on polymer processing thoroughly up to date with the latest fundamental developments in polymer processing while retaining the critically acclaimed approach of the First Edition Readers are provided with the complete panorama of polymer processing starting with fundamental concepts through the latest current industry practices and future directions All the chapters have been revised and updated and four new chapters have been added to introduce the latest developments Readers familiar with the First Edition will discover a host of new material including Blend and alloy microstructuring Twin screw based melting and chaotic mixing mechanisms Reactive processing Devolatilization theory mechanisms and industrial practice Compounding theory and industrial practice The increasingly important role of computational fluid mechanics A systematic approach to machine configuration design The Second Edition expands on the unique approach that distinguishes it from comparative texts Rather than focus on specific processing methods the authors assert that polymers have a similar experience in any processing machine and that these experiences can be described by a

set of elementary processing steps that prepare the polymer for any of the shaping methods On the other hand the authors do emphasize the unique features of particular polymer processing methods and machines including the particular elementary step and shaping mechanisms and geometrical solutions Replete with problem sets and a solutions manual for instructors this textbook is recommended for undergraduate and graduate students in chemical engineering and polymer and materials engineering and science It will also prove invaluable for industry professionals as a fundamental polymer processing analysis and synthesis reference

Computational Techniques for Fluid Dynamics Karkenahalli Srinivas,Clive Fletcher,2002-06-01 This complementary text provides detailed solutions for the problems that appear in Chapters 2 to 18 of Computational Techniques for Fluid Dynamics CTFD Second Edition Consequently there is no Chapter 1 in this solutions manual The solutions are indicated in enough detail for the serious reader to have little difficulty in completing any intermediate steps Many of the problems require the reader to write a computer program to obtain the solution Tabulated data from computer output are included where appropriate and coding enhancements to the programs provided in CTFD are indicated in the solutions In some instances completely new programs have been written and the listing forms part of the solution All of the program modifications new programs and input output files are available on an IBM compatible floppy direct from C A J Fletcher Many of the problems are substantial enough to be considered mini projects and the discussion is aimed as much at encouraging the reader to explore extensions and what if scenarios leading to further development as at providing neatly packaged solutions Indeed in order to give the reader a better introduction to CFD reality not all the problems do have a happy ending Some suggested extensions fail but the reasons for the failure are illuminating
