Abstract—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were randomly assigned to either a control group (CON) or an exercise group (EX). The EX group performed a 12-week training program consisting of three sessions per week of aerobic exercise. The HR and EE were measured at baseline and at the end of the 12-week training program. The EX group showed a significant decrease in HR and a significant increase in EE compared to the CON group. The results of this study suggest that a 12-week training program can effectively reduce HR and increase EE in sedentary, middle-aged women.

23. When configuring a multi-mount AFS, set `mountmnt` to your NetApp's `mountmnt` path: `mountmnt=/mnt/afsmount`
24. If you're using the `afs` file system mount method, add `afs` to the `fs` mount string from `File System` in step 16. In this example, the mounting method is `afs` and the mount string is `afs:/afs/afsmount`. This is required after the purchase of this type of multi-mount AFS, as pointing out the group appears in step 16.
25. Do not include the `File` or `Mount` from a `File` dependency.
26. Use the `Mount` dependency for multi-mount AFS or `Mount` for the `File` or `File` from a `File` dependency.

- Day and night periods that are longer than the standard 24 hours occur most commonly with the use of artificial light or other light sources. To avoid this, there are two things the producer should do:
 - Use natural light sources that are as close to the natural day/night cycle as possible.
 - Use red light for night time. Red light is the only light that the plant can't see, but the producer can see it. Red light is also the least harmful to the plant's circadian rhythm. Natural light is composed of the full spectrum of light.

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. For example, if the price of the output rises, the producer will increase its output level until the marginal revenue is equal to the marginal cost.

Abstract: This research was conducted to determine the effect of the use of a computer program on the learning of the concept of the area of a rectangle. The study was conducted in a classroom of a primary school in the city of Istanbul. The sample consisted of 20 students. The data were collected through a pre-test and a post-test. The results of the study showed that the use of the computer program had a positive effect on the learning of the concept of the area of a rectangle. The students who used the computer program showed higher scores than the students who did not use the computer program. The results of the study also showed that the use of the computer program had a positive effect on the learning of the concept of the area of a rectangle. The students who used the computer program showed higher scores than the students who did not use the computer program.
