A ^ATale of Seven Scientists and a New Philosophy of Science Eric Scerri,2016-10-10 Scerri discusses several less recognized scientists who worked throughout the twentieth century and shows how their contributions were just as key to scientific development as those of more commonly known figures These include Anton van den Broek who helped pioneer the atomic number and Edward Stoner who was the first to apply the third quantum number to the understanding the physics of the atom Throughout Scerri discusses the nature of scientific revolution arguing that it is the product of a complex community functioning as a single organism

The Strong Sylow Theorem for the Prime p in Simple Locally Finite Groups

Dipl.-Math. Felix F. Flemisch,2024-02-26 This research paper continues 15 We begin with giving a profound overview of the structure of arbitrary simple groups and in particular of the simple locally finite groups and reduce their Sylow theory for the prime p to a quite famous conjecture by Prof Otto H Kegel see 37 Theorem 2 4 Let the p subgroup P be a p uniqueness subgroup in the finite simple group S which belongs to one of the seven rank unbounded families Then the rank of S is bounded in terms of P about the rank unbounded ones of the 19 known families of finite simple groups We introduce a new scheme to describe the 19 families the family T of types define the rank of each type and emphasise the r le of Kegel covers This part presents a unified picture of known results whose proofs are by reference Subsequently we apply new ideas to prove the conjecture for the alternating groups Thereupon we are remembering Kegel covers and sequences

Next we suggest a way 1 and a way 2 how to prove and even how to optimise Kegel's conjecture step by step or peu peu which leads to Conjecture 1 Conjecture 2 and Conjecture 3 thereby unifying Sylow theory in locally finite simple groups with Sylow theory in locally finite and p soluble groups whose joint study directs Sylow theory in locally finite groups For any unexplained terminology we refer to 15 We then continue the program begun above to optimise along the way 1 the theorem about the first type A_n of infinite families of finite simple groups step by step to further types by proving it for the second type A_{PSLn} We start with proving Conjecture 2 about the General Linear Groups over commutative locally finite fields stating that their rank is bounded in terms of their p uniqueness and then break down this insight to the Special Linear Groups and the Projective Special Linear PSL Groups over locally finite fields We close with suggestions for future research regarding the remaining rank unbounded types the Classical Groups and the way 2 regarding locally finite and p soluble groups and regarding Cauchy's and Galois contributions to Sylow theory in finite groups We much hope to enthuse group theorists with them We include the predecessor research paper 15 as an Appendix
