Limits of the Numerical Christopher Newfield,Anna Alexandrova,Stephen John,2022-06-24 This collection examines the uses of quantification in climate science higher education and health Numbers may seem fragile they are after all frequent objects of obfuscation or outright denial but they have also never been more influential in our society figuring into everything from college rankings to vaccine efficacy rates This timely collection by a diverse group of humanists and social scientists challenges undue reverence or skepticism toward quantification and shows how it can be a force for good despite its many abuses Limits of the Numerical focuses on quantification in several contexts the role of numerical estimates and targets in explaining and planning for climate change the quantification of outcomes in teaching and research and numbers representing health the effectiveness of medical interventions and well being more broadly The authors complicate our understanding of these numbers uncovering for example epistemic problems with some core numbers in climate science But their theme is less the problems revealed by case studies than the methodological issues common to them all This volume shows the many ways that qualitative and quantitative approaches can productively interact how the limits of the numerical can be overcome through equitable partnerships with historical institutional and philosophical analysis
