

AP Biology

Neuron Structure Review

Name: _____

Cells are specialized for different functions in multicellular organisms. In animals, one unique kind of cell helps organisms survive by collecting information and sending messages throughout the body. The shapes and features of neurons, which are the primary cells in the nervous system, enable animals to experience all of the five senses; find food, mates, and shelter; and to survive in their diverse environments.

Model 1- Parts of a Neuron

- Model 1 is an illustration of two neurons. Match letters on the neurons in the diagram with the following structures:
 - Cell body or soma: Choose one
 - Axon: Choose one
 - Cell nucleus: Choose one
 - Synapse: Choose one
 - Dendrites: Choose one
- Which structure(s) on the neuron in Model 1 would receive a signal from either a sensory cell (taste bud, touch receptor, retinal cell) or from another neuron?
- Which direction would a nerve impulse move if a message were being sent through the two neurons? Choose one

Model 2- Membrane Potential

- Describe the cellular structure shown in detail in Model 2.
