**Handbook of Nanophysics** Klaus D. Sattler,2010-09-17 Providing the framework for breakthroughs in nanotechnology this landmark publication is the first comprehensive reference to cover both fundamental and applied physics at the nanoscale After discussing the theoretical principles and measurements of nanoscale systems the organization of the set follows the historical development of nanoscience Each peer reviewed chapter presents a didactic treatment of the physics underlying the nanoscale materials applications and detailed experimental results State of the art scientific content is enriched with fundamental equations and illustrations many in color

*AI vs Humans* Michael W. Eysenck,Christine Eysenck,2021-12-30 The great majority of books on artificial intelligence are written by AI experts who understandably focus on its achievements and potential transformative effects on society In contrast *AI vs Humans* is written by two psychologists Michael and Christine Eysenck whose perspective on AI including robotics is based on their knowledge and understanding of human cognition This book evaluates the strengths and limitations of people and AI The authors expertise equips them well to consider this by seeing how well or badly AI compares to human intelligence They accept that AI matches or exceeds human ability in many spheres such as mathematical calculations complex games e g chess Go and poker diagnosis from medical images and robotic surgery However the human tendency to anthropomorphise has led many people to claim mistakenly that AI systems can think infer reason and understand while engaging in information processing In fact such systems lack all those cognitive skills and are also deficient in the quintessentially human abilities of flexibility of thinking and general intelligence At a time when human commitment to AI appears unstoppable this up to date book advocates a

symbiotic and co operative relationship between humans and AI It will be essential reading for anyone interested in AI and human cognition      *Trust in Human-Robot Interaction* Chang S. Nam, Joseph B. Lyons, 2020-11-17 *Trust in Human Robot Interaction* addresses the gamut of factors that influence trust of robotic systems The book presents the theory fundamentals techniques and diverse applications of the behavioral cognitive and neural mechanisms of trust in human robot interaction covering topics like individual differences transparency communication physical design privacy and ethics Presents a repository of the open questions and challenges in trust in HRI Includes contributions from many disciplines participating in HRI research including psychology neuroscience sociology engineering and computer science Examines human information processing as a foundation for understanding HRI Details the methods and techniques used to test and quantify trust in HRI

**Digital Stimulation** Mimi Marinucci, 2024-09-05 *Digital Stimulation* explores the subject of intimacy including romantic and sexual intimacy between human and nonhuman entities particularly technological entities As relationships between humans and machines become increasingly prevalent it is important to address the potential for such relationships to reflect to reinforce or to reinvent existing hierarchies The distinction between man and machine like the distinction between man and beast between man and brute between man and nature between man and woman and so on is an expression of the anthropocentrism and androcentrism permeating western ideas of self and other Concerns about the representation or misrepresentation and treatment or mistreatment of machines are of consequence for other human and nonhuman others as well and this book details many of the ways in which depictions of machines especially robots mirror ideas and attitudes about various human and nonhuman others This book also addresses the ongoing development of machines designed explicitly for intimate engagement with humans such as sex robots As they become more and more lifelike it becomes progressively more urgent to cultivate compassion toward such machines      *Interactive Collaborative Robotics* Andrey

Ronzhin, Gerhard Rigoll, Roman Meshcheryakov, 2019-08-12 This book constitutes the refereed proceedings of the 4th International Conference on Interactive Collaborative Robotics ICR 2019 held in Istanbul Turkey in August 2019 The 32 papers presented in this volume were carefully reviewed and selected from 46 submissions They deal with challenges of human robot interaction robot control and behavior in social robotics and collaborative robotics and applied robotic and cyber physical systems      **Artificial Intelligence and the Future of Work: Humans in Control** Ekkehard Ernst, Janine

Berg, Phoebe V. Moore, 2024-10-01 *Artificial Intelligence* AI is rapidly advancing in areas such as pattern detection classification and prediction which were long thought to be the exclusive realm of humans These developments are triggering excitement about the potential of AI but are also raising concerns about possible risks The versatility of AI and its speed of development have led to a wide range of applications both in personal and professional environments The most dramatic effects are however in the world of work AI is impacting job loss and employability and causing a transformation of tasks in a range of occupations and sectors It is also affecting other aspects of the labor market such as recruitment performance

monitoring and dismissal As such the development and implementation of AI are raising concerns about the future of work both in terms of its mere existence and quality with critical implications for the social fabric as well as future development prospects

*Robot Vision* A. Pugh, 2013-06-29 Over the past five years robot vision has emerged as a subject area with its own identity A text based on the proceedings of the Symposium on Computer Vision and Sensor based Robots held at the General Motors Research Laboratories Warren Michigan in 1978 was published by Plenum Press in 1979 This book edited by George G Dodd and Lothar Rosso probably represented the first identifiable book covering some aspects of robot vision The subject of robot vision and sensory controls RoViSeC occupied an entire international conference held in the Hilton Hotel in Stratford England in May 1981 This was followed by a second RoViSeC held in Stuttgart Germany in November 1982 The large attendance at the Stratford conference and the obvious interest in the subject of robot vision at international robot meetings provides the stimulus for this current collection of papers Users and researchers entering the field of robot vision for the first time will encounter a bewildering array of publications on all aspects of computer vision of which robot vision forms a part It is the grey area dividing the different aspects of computer vision which is not easy to identify Even those involved in research sometimes find difficulty in separating the essential differences between vision for automated inspection and vision for robot applications Both of these are to some extent applications of pattern recognition with the underlying philosophy of each defining the techniques used

*Entrepreneurship in Tourism* Andreas Walmsley, 2025-05-29 This timely and innovative book is a theoretically underpinned yet accessible introduction to entrepreneurship in tourism The volume takes an intuitive step by step approach through entrepreneurship in tourism it begins with a review of key concepts in entrepreneurship and applies these to tourism it then tackles the practical elements of the entrepreneurial process in tourism as well as firm growth with a specific focus on entrepreneurial marketing The final chapters of the book take a more macro perspective at reviewing the place of entrepreneurship in society and how context shapes entrepreneurship in tourism This second edition has been fully updated to include A wider restructure of the original text including the addition of chapters on the context of tourism the addition of sustainable tourism entrepreneurship in a chapter on social and sustainable tourism entrepreneurship alongside a chapter on the role of tourism in offering a pathway to empowerment New content covering key developments in entrepreneurship including important topics that are only beginning to find their way into tourism literature This includes themes such as business models and business model innovation crowdfunding in tourism the role of AI and digitalisation in tourism marketing sustainable tourism entrepreneurship tourism entrepreneurial ecosystems and the role of tourism entrepreneurship in supporting empowerment and poverty alleviation These novel themes co exist alongside material from the first edition that remains under researched such as how tourism firms may maintain an entrepreneurial orientation and innovations in tourism employment Updated global case studies and examples from industry and academia throughout Each chapter offers an abstract learning outcomes and a series of questions to stimulate critical engagement with

the material covered As such the text offers an invaluable resource to tutors and their students on both undergraduate and postgraduate programmes in tourism as well as tourism scholars engaging with the dynamic phenomenon of entrepreneurship in tourism

**Intelligent Autonomous Systems 11** Henrik I. Christensen, 2010 Sensorimotor Foundations of Social Cognition Andreas K. Engel, Paul F. M. J. Verschure, Danica Kragic, Daniel Polani, Alfred Oliver Effenberg, Peter König, 2022-06-21

**Explainable Human-AI Interaction** Sarath Sreedharan, Anagha Kulkarni, Subbarao Kambhampati, 2022-05-31 From its inception artificial intelligence AI has had a rather ambivalent relationship with humans swinging between their augmentation and replacement Now as AI technologies enter our everyday lives at an ever increasing pace there is a greater need for AI systems to work synergistically with humans One critical requirement for such synergistic human AI interaction is that the AI systems behavior be explainable to the humans in the loop To do this effectively AI agents need to go beyond planning with their own models of the world and take into account the mental model of the human in the loop At a minimum AI agents need approximations of the human s task and goal models as well as the human s model of the AI agent s task and goal models The former will guide the agent to anticipate and manage the needs desires and attention of the humans in the loop and the latter allow it to act in ways that are interpretable to humans by conforming to their mental models of it and be ready to provide customized explanations when needed The authors draw from several years of research in their lab to discuss how an AI agent can use these mental models to either conform to human expectations or change those expectations through explanatory communication While the focus of the book is on cooperative scenarios it also covers how the same mental models can be used for obfuscation and deception The book also describes several real world application systems for collaborative decision making that are based on the framework and techniques developed here Although primarily driven by the authors own research in these areas every chapter will provide ample connections to relevant research from the wider literature The technical topics covered in the book are self contained and are accessible to readers with a basic background in AI
